Version for Public consultation – 2015-02-03

10	Table of contents	
11	1	Introduction..... 7
12	2	Scope 7
13	3	Business Requirements 8
14	3.1	CAM/CMP requirements..... 8
15	3.1.1	List of actors 9
16	3.1.1.1	Auction Office 9
17	3.1.1.2	Network User 9
18	3.1.1.3	Transmission System Operator 9
19	3.1.1.4	Booking platform 9
20	3.2	Use case detail..... 10
21	3.2.1	Register Network User (not referenced in the CAM/CMP regulation) 10
22	3.2.1.1	Validate Network user registration 10
23	3.2.2	Register Bookable Points..... 10
24	3.2.3	Auction capacity 11
25	3.2.3.1	Determine offered capacity 12
26	3.2.3.1.1	Surrender capacity 13
27	3.2.3.1.1.1	Submit capacity for surrender..... 13
28	3.2.3.1.1.2	Transmit surrendered capacity information 13
29	3.2.3.1.1.3	Determine surrender validity 14
30	3.2.3.1.1.4	Intergate into Offered Capacity 14
31	3.2.3.1.1.5	Determine surrendered capacity sold..... 14
32	3.2.3.1.2	Define amount between TSOs..... 14
33	3.2.3.1.3	Send offered capacity..... 14
34	3.2.3.1.4	Publish offered capacity 15
35	3.2.3.2	Bid for capacity 15
36	3.2.3.2.1	Submit bid..... 16
37	3.2.3.2.2	Modify bid 16
38	3.2.3.2.3	Cancel a bid 16
39	3.2.3.3	Allocate capacity 17
40	3.2.3.4	Publish auction results 17

41	3.2.4	Determine if capacity buyback is necessary	17
42	3.2.4.1	Identify firm capacity nominated over technical capacity	18
43	3.2.4.2	Determine if alternative technical and commercial measures can be	
44	applied	18	
45	3.2.4.3	Establish capacity to be bought back.....	18
46	3.2.4.4	Submit to Auction Office the buyback requirements.....	18
47	3.2.5	Operate secondary market (not referenced in the CAM/CMP regulation)	19
48	3.2.5.1	Submit a Trade Proposal.....	19
49	3.2.5.2	Respond to a Trade Proposal	20
50	3.2.5.3	Accept the Trade (conditional to Transmission System Operator approval)	
51		20	
52	3.2.5.4	Confirm a Trade	20
53	3.2.6	Manage credit limits (not referenced in the CAM/CMP regulation)	20
54	3.3	Information flow definition	22
55	3.3.1	CAM/CMP Sequence flow	22
56	3.3.1.1	Bookable point registration	23
57	3.3.1.2	Network User registration	23
58	3.3.1.3	Approved Network Users.....	23

132		

133 **1 Introduction**

134 The Capacity Allocation Mechanism (CAM) Network Code (NC) and Congestion Management
135 Procedures (CMP) guidelines set forth provisions regarding capacity allocation mechanisms
136 and congestion management procedures. The CAM NC defines a standardised capacity
137 allocation mechanism in the form of an auction procedure for relevant Interconnection
138 Points within Europe, including the underlying Standard Capacity Products to be offered and
139 the description of how cross-border capacity is to be allocated. The manner in which
140 adjacent Transmission System Operators cooperate in order to facilitate capacity sales,
141 taking into consideration general commercial as well as technical rules related to capacity
142 allocation mechanisms are also outlined.

143 Additionally, the CMP guidelines defines how congestion management procedures are put
144 into place in the event of contractual congestion.

145

146 **2 Scope**

147 This document defines the external business requirements that are necessary for a
148 harmonised implementation of the transmission of information between parties related to
149 the CAM Network Code, the CMP guidelines and other issues not included in these
150 regulations but related to them (marked as “not referenced in the CAM/CMP regulation” in
151 this document, e.g. credit limits, master data). It is intended to be used by parties
152 participating in the capacity allocation mechanism and congestion management procedures.
153 In particular, the Business Requirements Specification (BRS) enables EASEE-gas to produce
154 the Message Implementation Guideline (MIG).

155 The BRS does not cover the following subjects, which are referred to in the CAM NC/CMP
156 guidelines but are not essential for the allocation of primary and secondary capacity or for
157 congestion management:

- 158 - Co-ordination of maintenance information
- 159 - Nominations against capacity rights

160 This BRS covers requirements for the harmonised implementation of auctions for primary
161 capacity and congestion management procedures as specified in the CAM NC/CMP
162 guidelines. The requirements therefore define the necessary interfaces for the
163 implementation, from an IT perspective, of a capacity allocation and congestion
164 management system.

165 This BRS is targeted towards business-to-business application interfaces or in a more user-
166 orientated fashion through a web-based service.

167 This document does not define a governance process for attribute definitions or other
168 requirements. Such a process will need to be determined and defined elsewhere.

169 The requirements set out in this document are subject to change if there is any change in the
170 obligations on Transmission System Operators or any other party.

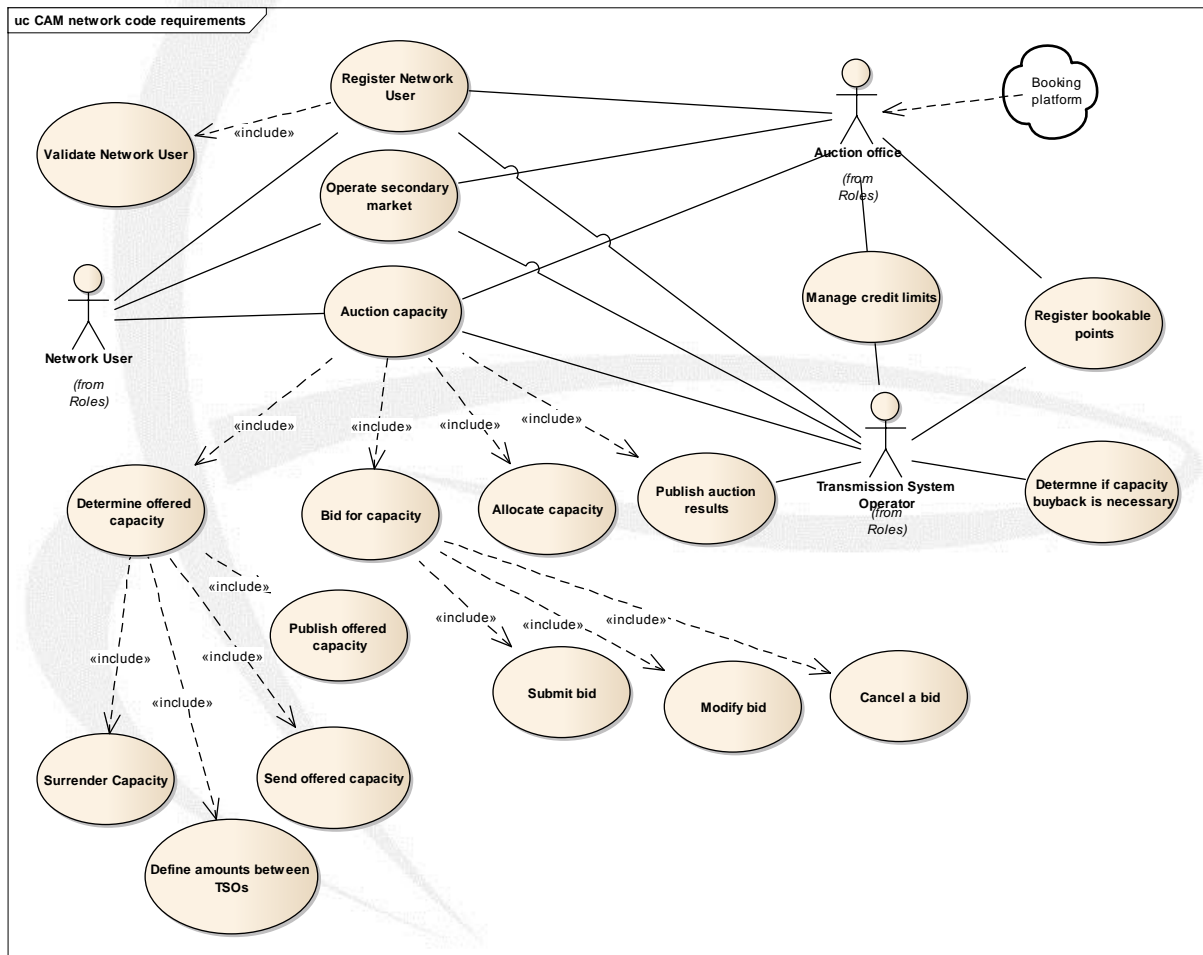

171 **3** **These Business Requirement Specifications (BRS) shall define a set of**
 172 **standardized processes which supports the implementation of Commission**
 173 **Regulation (EU) No. 984/2013 and Annex I to Regulation (EC) No 715/2009.**
 174 **Due to continuing implementation the BRS need to be revised and**
 175 **subsequently updated. Business Requirements**

176 This section describes in detail the business requirements that the information flows are
 177 intended to satisfy.

178 3.1 CAM/CMP requirements

179 This section outlines the overall business process behaviour of the system without going into
 180 the detailed internal workings of each entity. It defines the external requirements of the
 181 business process: the relationships between the entities concerned.

182

183

184

Figure 1: overview of the CAM/CMP process use case

185 **3.1.1 List of actors**

186 **3.1.1.1 Auction Office**

187 The party that is responsible for the reception of bids and for the allocation of capacity as
188 well as for the management of the booking platform, acting on behalf of Transmission
189 System Operators. One of the involved Transmission System Operators may be designated
190 as the Auction Office.

191 **3.1.1.2 Network User**

192 A Network User is defined in the Regulation No 715/2009 in Article 2, 11. A Network User
193 that has acceded to and is compliant with all applicable legal and contractual requirements
194 that enable him/her to book, trade and use capacity on the relevant Transmission System
195 Operator's network under a capacity contract.

196 **3.1.1.3 Transmission System Operator**

197 A natural or legal person who carries out the function of transmission and is responsible for
198 operating, ensuring the maintenance of, and, if necessary, developing the transmission
199 system in a given area, and, where applicable, its interconnections with other systems. It is
200 also responsible for ensuring the long term ability of the system to meet reasonable
201 demands for the transportation of gas.

202 **3.1.1.4 Booking platform**

203 An application that implements the rules and processes for offering and allocation of all
204 capacity and may permit Network Users to offer and obtain secondary capacity.

205 It is managed by an Auction Office.

206 **3.2 Use case detail**

207 Besides the aforementioned requirements for coordinated implementation, the further core
208 processes need to be considered as preconditions to the implementation of other
209 requirements arising from NC CAM. It is understood that the registration of the Transmission
210 System Operators is always carried out within the relevant Auction Offices.

211 **3.2.1 Register Network User (not referenced in the CAM/CMP regulation)**

212 In order to participate in the auctioning processes to obtain capacity, the Network User and
213 the personnel authorized to use the Booking platform (authorized personnel) need to be
214 registered with the Auction Office and the Transmission System, Operator(s), from whom it
215 seeks to buy capacity. The registration process includes the submission of the individual
216 Network User master data to the Auction Office and the Transmission System Operator(s).

217 The Network User transmits to the Auction Office the data required by the Auction Office for
218 gaining access to the booking platform. The Network User also transmits to the
219 Transmission System Operator(s) the data required by the Transmission System Operator(s),
220 from whom the Network User would like to get capacity. The new Network User must
221 provide a unique identification, such a EIC code, to the Auction Office and to the
222 Transmission System Operator(s) in order to ensure a unique identifier of the company on
223 the booking platform in place.

224 The Network User also provides information concerning each of its authorized personnel.
225 Network user accounts or balancing groups may be provided to the Auction office where
226 required by the Transmission System Operator.

227 After the transfer of the registration data of a Network User, both the Transmission System
228 Operator and the Auction office verifies the data. The Transmission System Operator informs
229 the Network User of the approval/rejection of access to its network.

230 **3.2.1.1 Validate Network user registration**

231 The Auction office after verification forwards the necessary data to the Transmission System
232 Operator for validation.

233 The Transmission System Operator validates the information received.

234 The result of the validation is communicated to the Auction office. The Auction office
235 informs the Network User of the approval/rejection of access to the booking platform.

236 **3.2.2 Register Bookable Points**

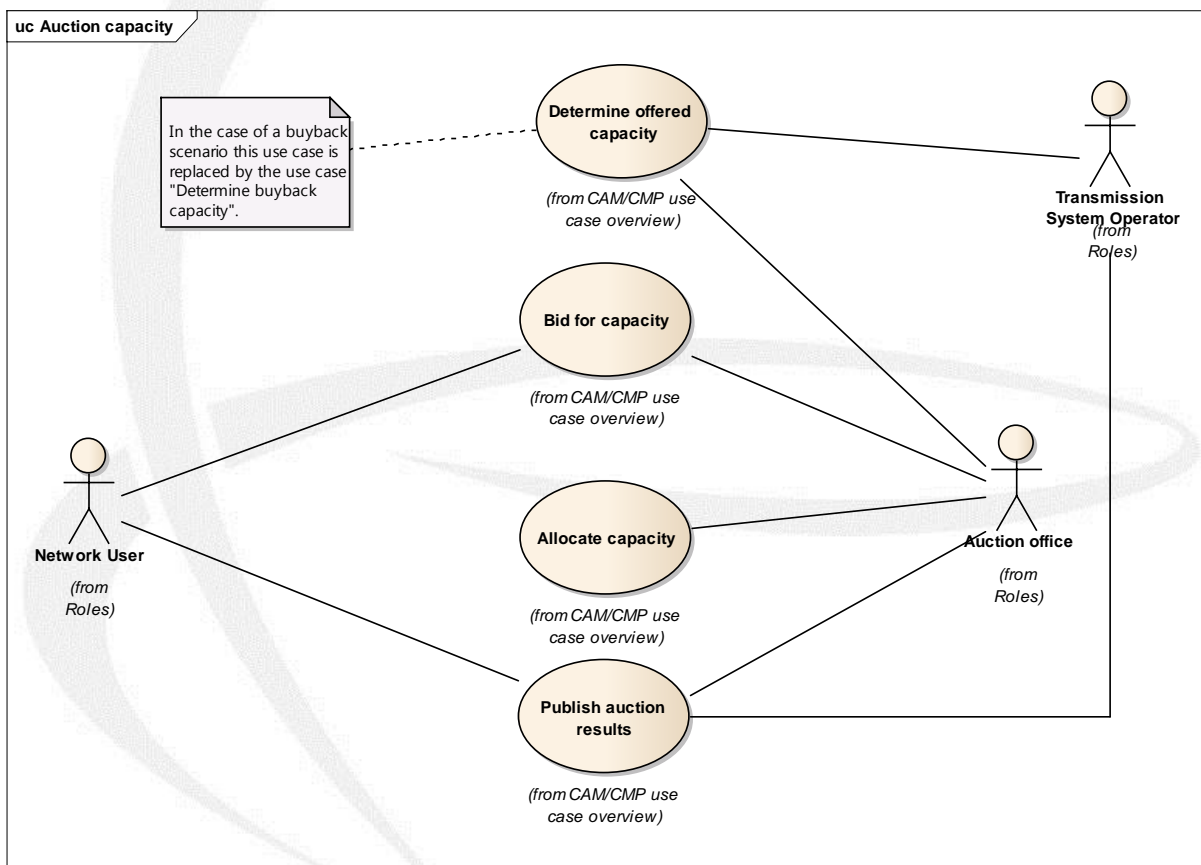

237 Before any capacity can be offered to the market the bookable points need to be defined by
238 the Transmission System Operators and submitted to the Auction Office for the publication
239 on the booking platform. Necessary updates of bookable point data are also included in this
240 process.

241 A bookable point is defined as the identification, such as EIC code, of the connection point,
242 the “to TSO” and “from TSO” or in the case of one TSO at both sides of the connection point
243 the “to Market area” and the “from Market area”. It may be that the “to TSO” or the “from
244 TSO” is not required in the case of an unbundled product.

245 The bookable point will then be visible on the booking platform.

246 3.2.3 Auction capacity

247 This use case permits the auction and the allocation of capacity at an interconnection point
248 using an "ascending clock" or "uniform price" auction mechanism, as described in sections
249 4.10 and 4.11 of the CAM NC, respectively. In the case the buyback process is carried out
250 through an auction, the same auction process may be used with the exception that the use
251 case “Determine offered capacity” is replaced by the use case “Determine Buyback capacity”
252 to cover the determination of buyback capacity.

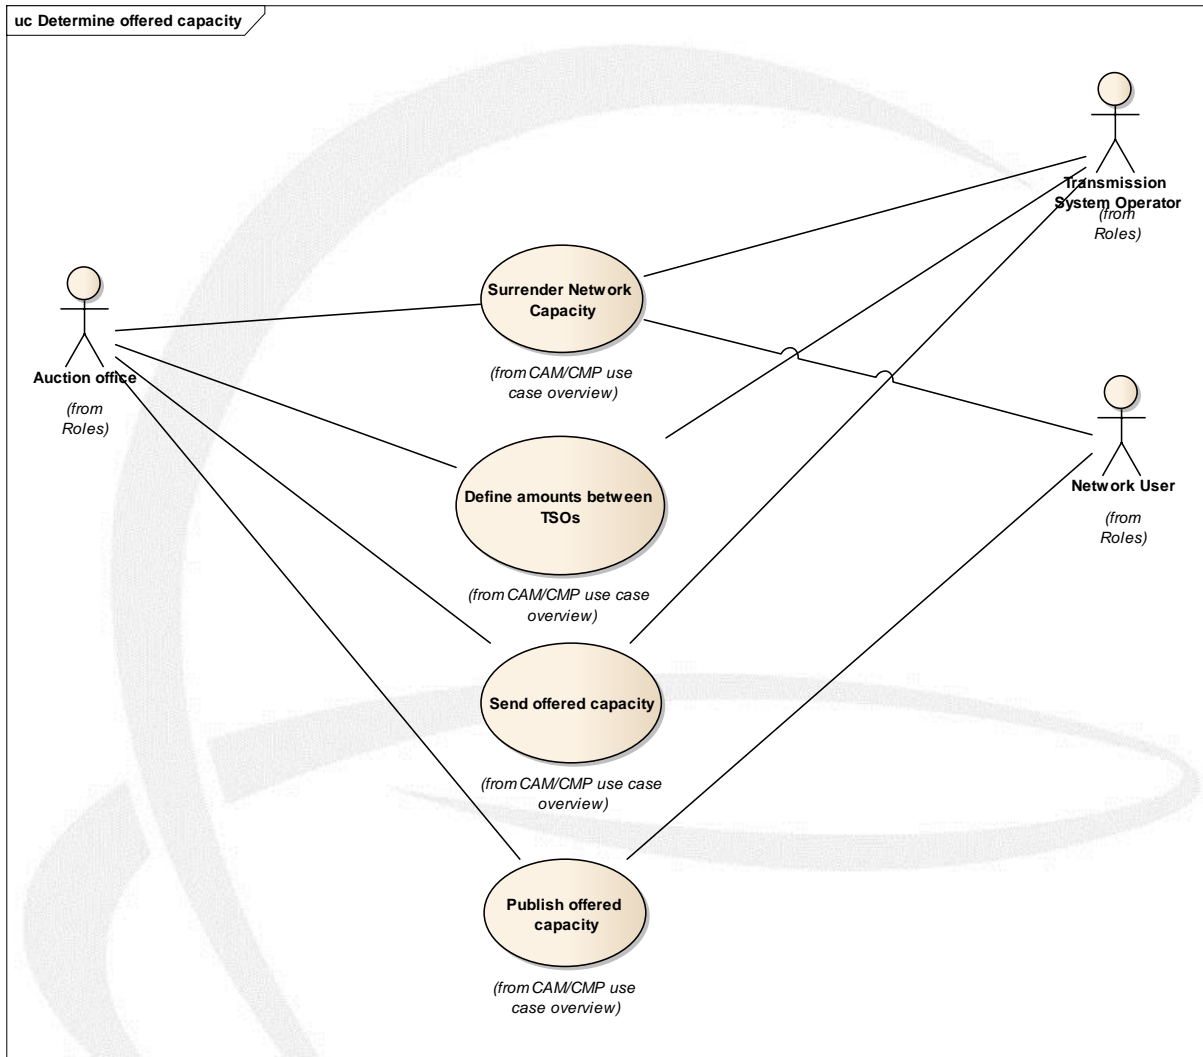

253
254

Figure 2: the auction capacity use case

255 Figure 2 outlines the relations that exist between each of the use cases and the actors.

256 **3.2.3.1 Determine offered capacity**

257 The Transmission System Operator determines the capacity that shall be offered to the
258 market for auctioning. The determination of the capacity is carried out through the use case
259 as outlined in the use case in Figure 3.

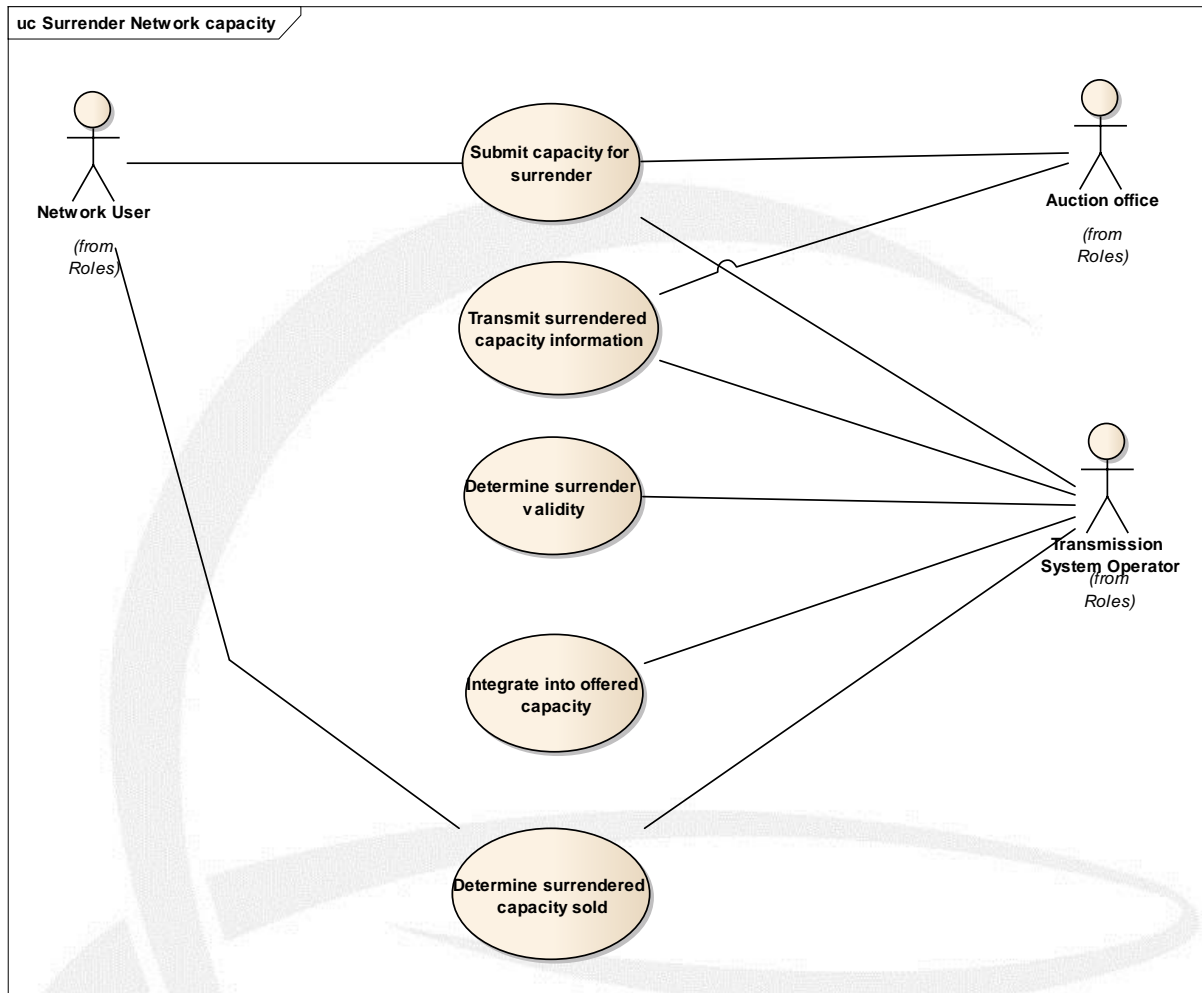

260
261

Figure 3: Determine offered capacity use case

262 Once the Transmission System Operator has defined the Offered Capacity it is transmitted to
263 the Auction Office.

264 **3.2.3.1.1 Surrender capacity**

265
266

Figure 4: CMP surrender network capacity use case

267 **3.2.3.1.1.1 Submit capacity for surrender**

268 The Network User may surrender capacity to either the Auction Office or directly to the
269 Transmission System Operator(s) for resale at any time. The surrendered capacity must be
270 identified as bundled or unbundled and concerns at least capacity products with a duration
271 longer than a day, subject to the NRA decision.

272 Bundled capacity shall only be surrendered as bundled.

273 A bundled or unbundled capacity surrender request must identify the Transmission System
274 Operator(s) as well as their underlying contracts.

275 **3.2.3.1.1.2 Transmit surrendered capacity information**

276 In the case where capacity is surrendered to an Auction Office, the Auction Office transmits
277 the surrendered capacity received to the Transmission System Operator(s).

278 **3.2.3.1.1.3 Determine surrender validity**

279 The Transmission System Operator ensures the validity of all Network Users submission.

280 **3.2.3.1.1.4 Integrate into Offered Capacity**

281 Once the surrendered capacity is validated, the Transmission System Operator integrates
282 the information into the offered capacity.

283 **3.2.3.1.1.5 Determine surrendered capacity sold**

284 The Transmission System Operator allocates the surrendered capacity sold to the Network
285 Users depending on local market rules and informs them of their capacity that has been
286 sold.

287 **3.2.3.1.2 Define amount between TSOs**

288 The Transmission System Operator calculates the capacity to be offered within the Booking
289 Platform.

290 1st option:

291 As default rule, the Transmission System Operators shall decide to let the Auction
292 Office determine the bundled and unbundled capacity that makes up the established
293 offered capacity. Each Transmission System Operator at each side of the IP shall
294 inform the Auction Office of the offered capacity. The Auction Office shall apply the
295 lesser rule in order to determine the bundled capacity. The final result must be
296 confirmed before publication by the both Transmission System Operators.

297 Any differences between the lesser value calculated by the Auction Office and the
298 capacity previously sent by Transmission System Operators can be considered as
299 unbundled capacity and may be auctioned separately.

300 Such unbundled capacity will be clearly identified by the Auction Office to the
301 Network Users at the time when the capacity is offered.

302 2nd option:

303 The use case “Define amounts between TSOs” is used in this case by the
304 Transmission System Operators to define the bundled and unbundled capacity that
305 will make up the offered capacity. The final result is then sent by at least one of the
306 Transmission System Operators to the Auction Office for publication. In case of
307 mismatch then both quantities are rejected.

308 **3.2.3.1.3 Send offered capacity**

309 The offered capacity is sent to the Auction Office (booking platform) by the Transmission
310 System Operator.

311 **3.2.3.1.4 Publish offered capacity**

312 The Auction Office then publishes the part of the offered capacity that will be auctioned as
313 bundled capacity and the part of the offered capacity that will be auctioned as unbundled
314 capacity.

315 The Network Users are also informed in the publication of any reserve price and, in the case
316 of ascending clock auctions, the price for the bidding rounds.

317 **3.2.3.2 Bid for capacity**

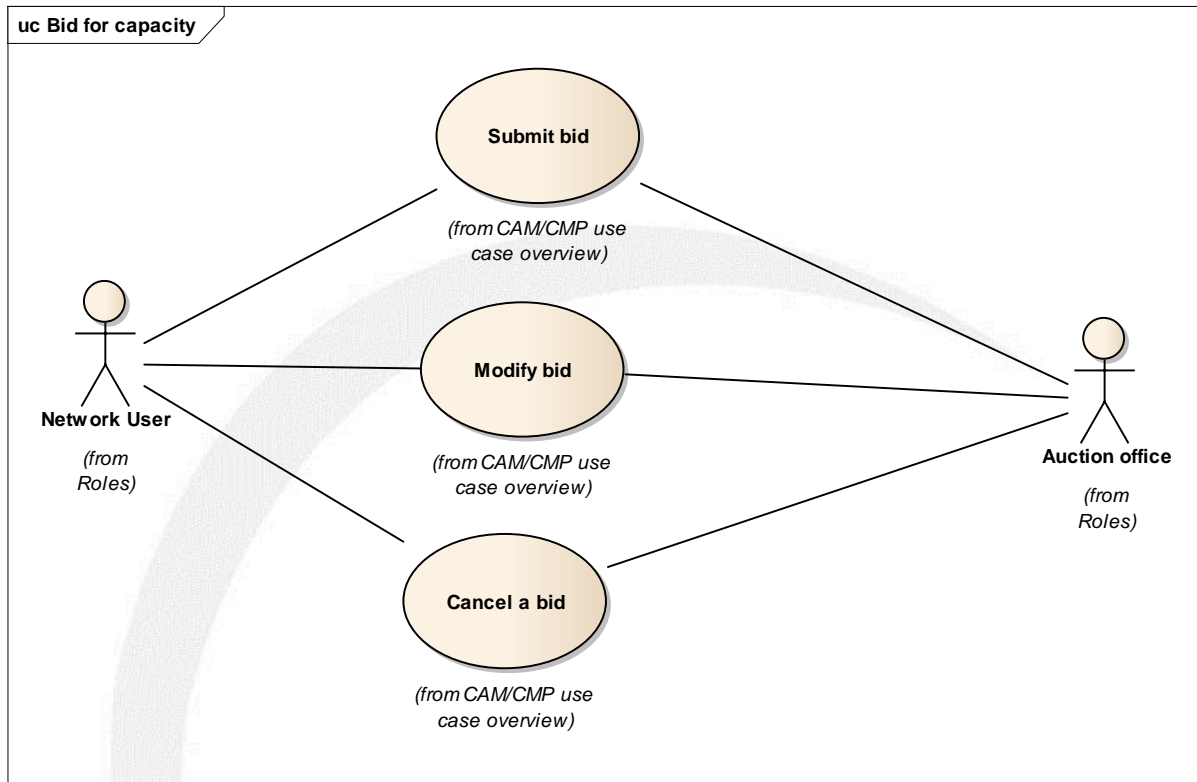

318 For a given auction (in which one capacity product covering a specific period is offered)
319 Network Users submit bids with the amount of capacity required (for the price step
320 announced in the concerned bidding round in the case of an ascending clock auction) and, in
321 the case of uniform price auctions, the price they are willing to pay and they may also
322 indicate the minimum capacity that is acceptable in the case of a reduced allocation.

323 In the case of an ascending clock auction, the Network user may submit only one valid bid
324 per bidding round. This bid may be modified or withdrawn during the course of bidding
325 round. The maximum volume bid in any Bidding Round per Registered Network shall be
326 equal or smaller to the offer of capacity in a specific round.

327 In the case of a uniform price auction, a maximum of 10 bids may be entered per Network
328 User per auction.

329 The Transmission System Operator shall rank all bids relating to a given standard capacity
330 product according to their bid price, the highest price ranking first. Following the ranking of
331 the bids, capacity shall be allocated to the bids in function of their price ranking.

332

333

334

Figure 5: bid for capacity use case

3.2.3.2.1 Submit bid

336 The Network User submits bids for an amount of capacity for the price step announced in
337 the concerned bidding round, in the case of an ascending clock auction, or an amount of
338 capacity (requested and minimum) and price, in the case of a uniform price auction. Each bid
339 shall refer to a given product within a given auction. In an ascending clock auction, such bids
340 shall respect the rules on bid quantities set out in sections 4.10 5), 4.10 8) and 4.10 16) of
341 the CAM NC.

3.2.3.2.2 Modify bid

342 As long as the bidding round is open, a Network User may modify the amount of capacity
343 and (where relevant) the price associated with that bid.

3.2.3.2.3 Cancel a bid

346 The Network User may at any time before the closure of a bidding round cancel a bid placed
347 earlier in that round, which will then no longer be available for modification during future
348 bidding.

349 **3.2.3.3 Allocate capacity**

350 The capacity is allocated respecting market rules, as set out in articles 4.10 20 (in an
351 ascending clock auction) and 4.11 6 - 4.11 10 (in a uniform price auction) of the CAM NC.

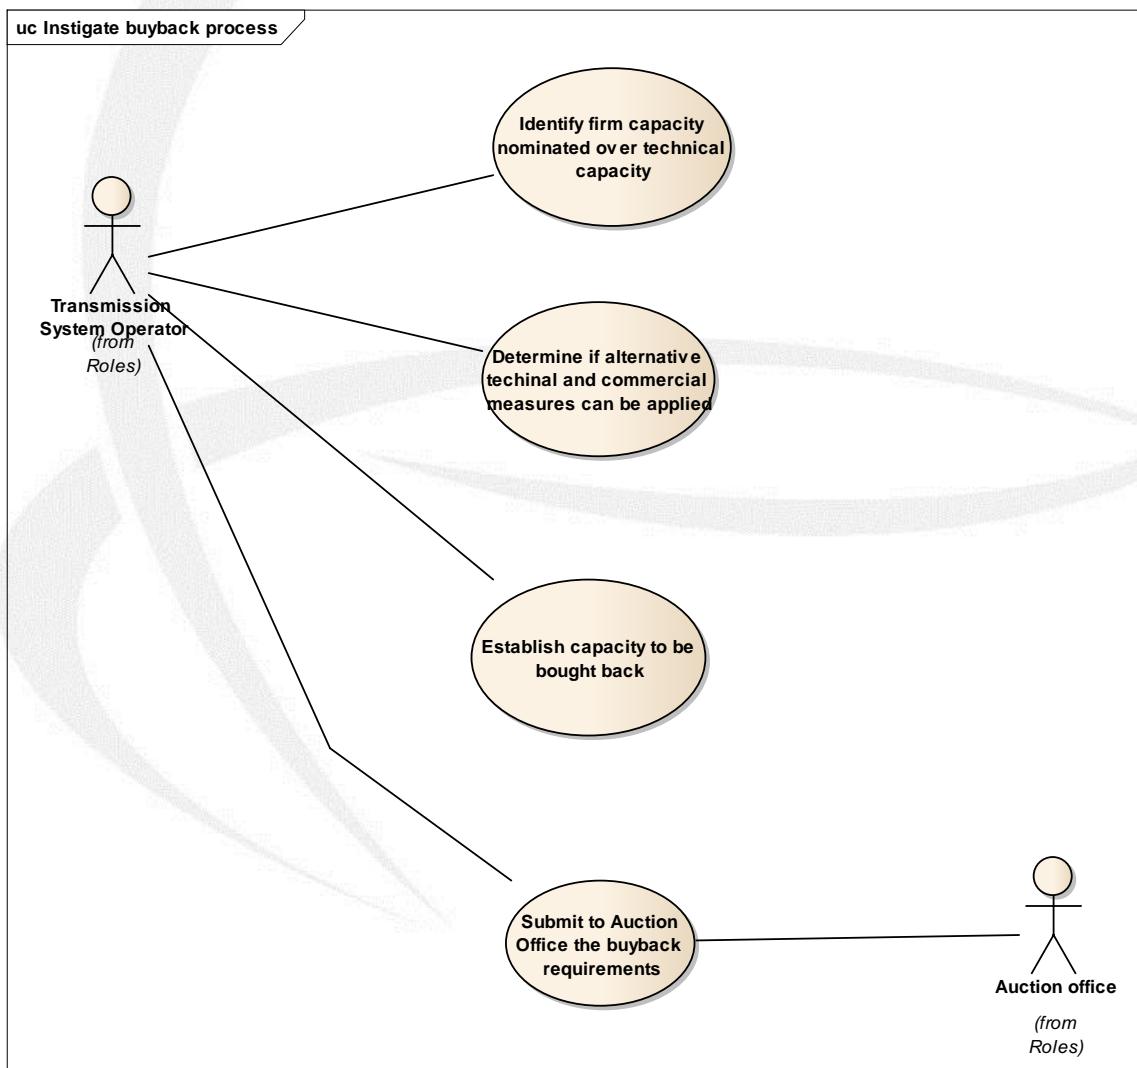

352 **3.2.3.4 Publish auction results**

353 Network Users are informed by the Auction Office of the results of the bids that they have
354 submitted.

355 The Auction Office informs the market of the final aggregated auction information.

356 The Auction Office provides the Transmission System Operators with the detailed auction
357 results.

358 **3.2.4 Determine if capacity buyback is necessary**

359
360

Figure 6: Buyback use case

361 **3.2.4.1 Identify firm capacity nominated over technical capacity**

362 The Transmission System Operator shall identify firm capacity nominated over technical
363 capacity.

364 **3.2.4.2 Determine if alternative technical and commercial measures can be**
365 **applied**

366 The Transmission system Operator then determines if any alternative technical and
367 commercial measures can be applied.

368 **3.2.4.3 Establish capacity to be bought back**

369 The Transmission System Operator determines the amount of capacity that will have to be
370 bought back to re-establish the situation. The Transmission System Operator is unaware of
371 whether this requirement can be satisfied by bundled or unbundled auctioned capacity.

372 **3.2.4.4 Submit to Auction Office the buyback requirements**

373 The Transmission System Operator shall send capacity to be purchased to the Auction Office
374 so that a buyback auction can be put into place. The Transmission System Operator may
375 include some restrictions, for example:

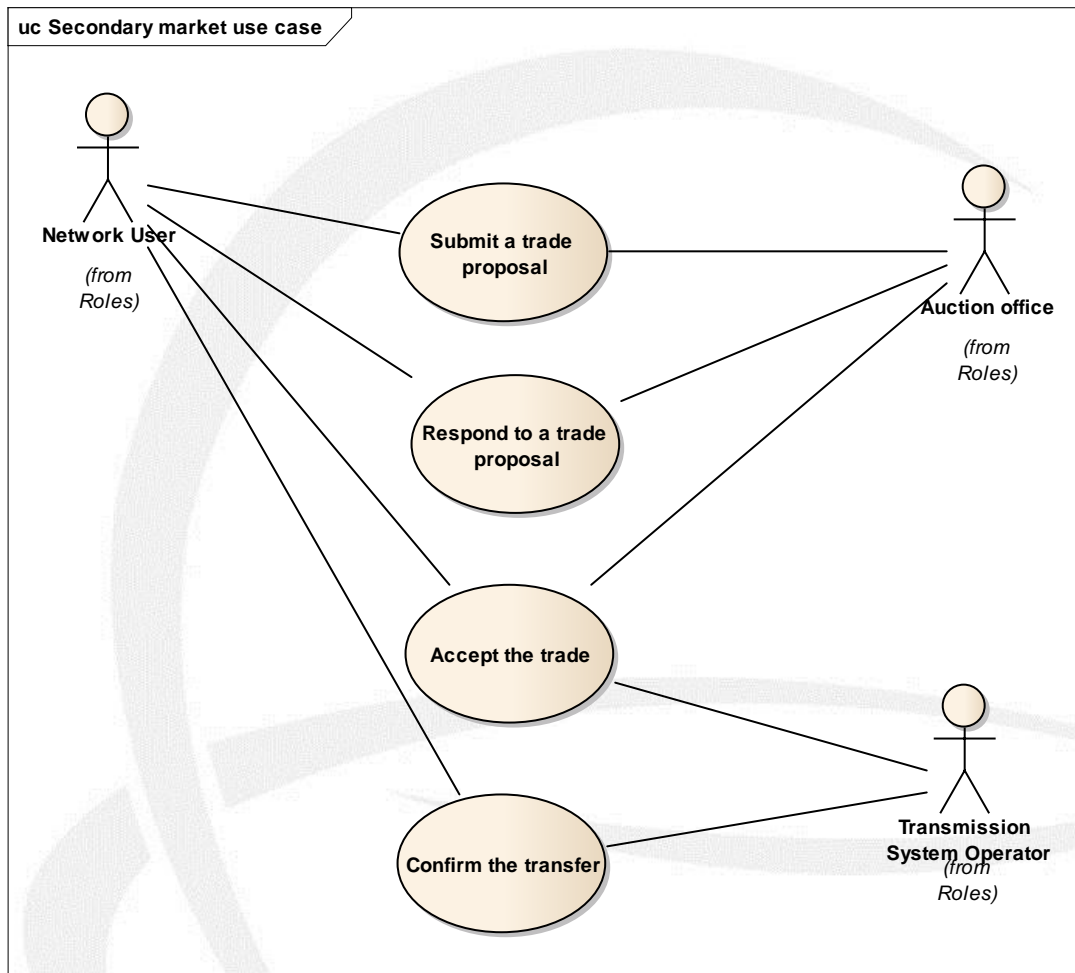

- 376
- the maximum price the Transmission System Operator is willing to pay for buying
377 back the capacity
 - the list of Network Users that are allowed to participate in the buy-back procedure
- 378

379 As an alternative to the buyback auction the Transmission System Operator may buy back
380 the capacity by playing the role of a Network User on the secondary market.

381 The use cases of submit bid, modify bid and cancel bid are the same except that the auction
382 type is generally a uniform price auction where the seller may provide in the bid the capacity
383 for sale and its price. Local market rules may determine that an ascending clock auction shall
384 be used.

385 **3.2.5 Operate secondary market (not referenced in the CAM/CMP**
386 **regulation)**

387 This section covers Secondary market functionalities handled by capacity booking platforms
388 as well as the transfer of capacity rights at the conclusion of each trade.

389
390

Figure 7: Secondary market capacity

391 **3.2.5.1 Submit a Trade Proposal**

392 A Network User has the possibility to sell or buy capacity to other Network Users

393 Consequently a Network User can submit a trade proposal to the secondary market to sell or
394 buy capacity concerning a connection point. The proposal shall include information about
395 the bookable point, capacity, period, availability type of capacity, bundled/unbundled,
396 nature of transfer(full or partial transfer of rights), price and in case it is a proposal to sell
397 capacity the identification of the related capacity contract incl. issuer of the contract, the
398 duration over which the trade is valid. The trade proposal can be updated/withdrawn by the
399 submitter.

400 **3.2.5.2 Respond to a Trade Proposal**

401 After the publication of a trade proposal Network Users can respond to it by conceding the
402 offer at a given price or by proposing capacity at a requested price.

403 **3.2.5.3 Accept the Trade (conditional to Transmission System Operator 404 approval)**

405 If an appropriate response to a trade proposal is received from a Network User, the
406 submitter of the trade proposal can close the trade by accepting the response. Once the
407 response to the trade proposal is accepted, it is sent to the relevant Transmission System
408 Operator(s) for confirmation.

409 **3.2.5.4 Confirm a Trade**

410 The Transmission System Operator(s) must be informed about the trade by the involved
411 Network Users or by the Auction Office on their behalf. The Transmission System
412 Operator(s) confirms or rejects the transfer after carrying out the necessary validity checks.

413 The information about the confirmation or rejection of a transfer is sent to the involved
414 Network Users.

415 **3.2.6 Manage credit limits (not referenced in the CAM/CMP regulation)**

416 In order to ensure that a Network User is permitted to purchase a given quantity of capacity
417 during the auction process or a secondary market transaction a Transmission System
418 Operator may inform the Auction Office of the permitted financial limits for a Network User
419 if required.

420 The Transmission System Operator indicates also two essential pieces of information:

- 421 • Information concerning the set of rules (herein after called as “Framework”) in which
422 a Transmission System Operator identifies each product (auction and secondary
423 trades) subjected to credit limit verification and the multiplication factor to be
424 applied to a Network User’s bid associated to a specific product.
- 425 • Information concerning the Network User validity period(s) of the limits and
426 associated credit value(s).

427 The Transmission System Operator informs the Auction Office of the Network User credit
428 limits every time there is an evolution to them.

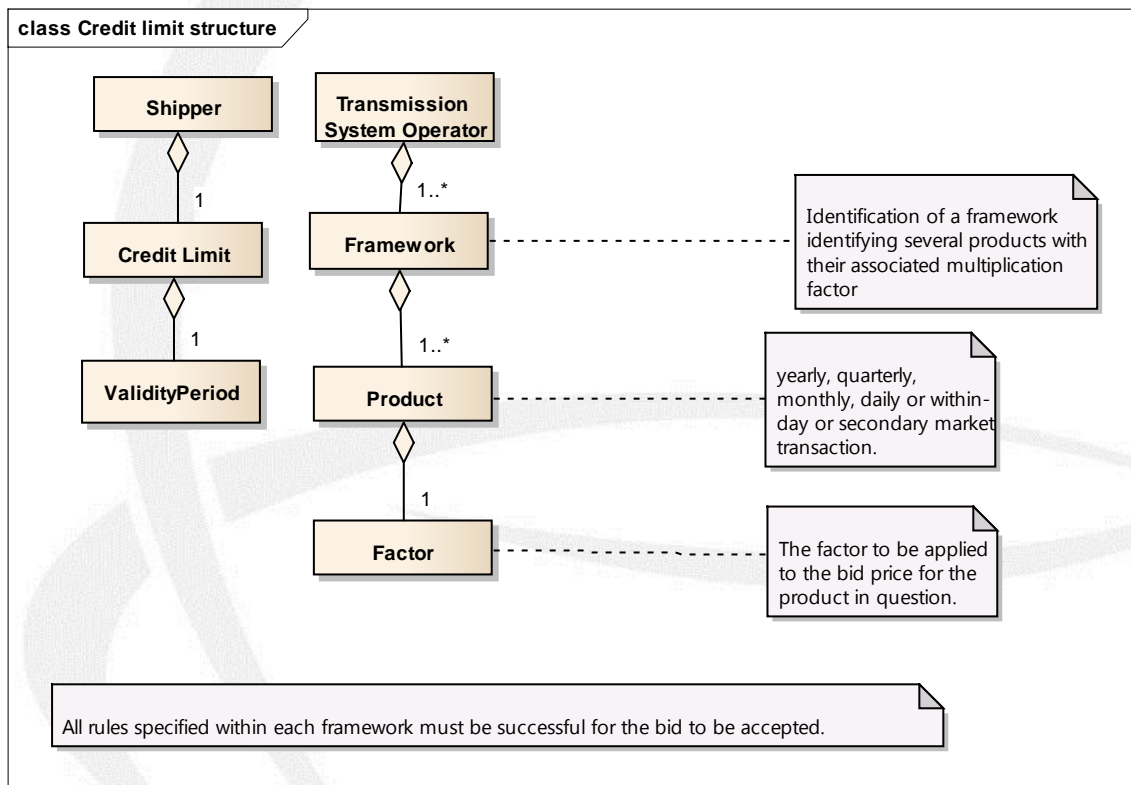

429 The financial value for a given Network User’s bid associated to a specific product is
430 determined by the multiplication of the unitary price (reserve price + Network User’s bid),
431 the period associated with the product and the multiplication factor of the product. Before
432 the acceptance of a Network User’s bid, the Auction Office verifies if the Network User’s
433 credit limit is equal to or greater than the financial value of the bid. If this is the case, the
434 Auction Office accepts the bid and adjusts the credit limit after each allocation. The Auction
435 Office provides this information to the Transmission System Operator.

436 A Network User may have a credit limit and an associated validity period. The credit limit
437 covers all the guarantees that the Network User may hold.

438 The Transmission System Operator may define several frameworks. Each framework
439 includes the following information: name of the framework; product type; credit factors
440 which apply to the products.

441 The determination of whether or not a credit limit is exceeded is carried out on a per bid
442 basis where for the product in each framework that the Transmission System Operator
443 decides to apply credit limit verifications, is equal to or greater than the financial value of
444 the bid. If this check is not positive then the credit limit is deemed to be exceeded and the
445 bid is rejected.

446 When a bid is accepted the credit limit for the Network User is modified accordingly.

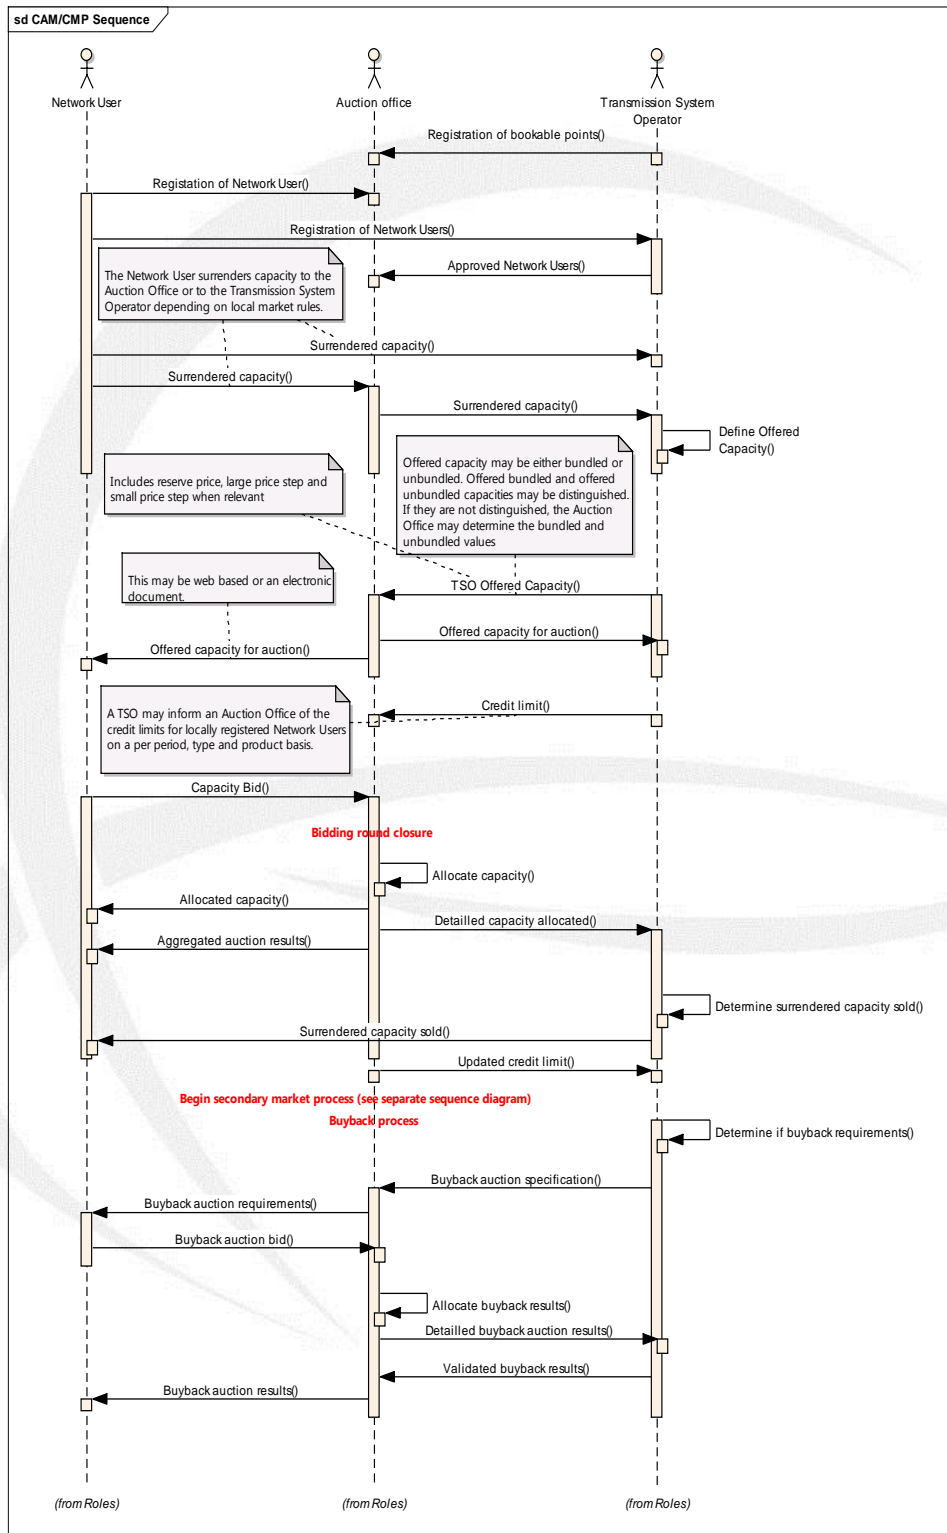

447
448

Figure 8: Credit limit requirements

449 **3.3 Information flow definition**

450 **3.3.1 CAM/CMP Sequence flow**

451
452

Figure 9: Information flow sequence

453 **3.3.1.1 Bookable point registration**

454 The Transmission System Operator provides the Auction Office with the information of all
455 the connection points that will be used in capacity auctions and where capacity can be
456 booked.

457 **3.3.1.2 Network User registration**

458 Prior to operating on the market a Network User must register with the Transmission system
459 Operator and the Auction Office if the Network User wishes to participate in capacity
460 auctions.

461 **3.3.1.3 Approved Network Users**

462 The Transmission System Operator will validate and approve the Network User's
463 participation. The Transmission System Operator informs the Auction Office of the Network
464 Users that are permitted to participate in capacity auctions.

465 **3.3.1.4 Surrender capacity rights**

466 Prior to a given auction period a Network User may surrender capacity rights that he holds
467 for the intended period of the auction. The capacity to be surrendered is sent either to the
468 Auction Office for transmission to all involved Transmission System Operators or to the
469 Transmission System Operator(s). Once verified the capacity will be incorporated into the
470 total offered capacity for the next auction product.

471 **3.3.1.5 Offered capacity**

472 The capacity on offer shall be sent by each Transmission System Operator to the Auction
473 Office in compliance with the business case defined in section **Error! Reference source not**
474 **found.**

475 The Auction Office assigns an auction identification to the offered capacity provided by the
476 Transmission System Operators.

477 The Auction office informs the TSOs of the products that will be auctioned and publishes the
478 information for use by the market along with any price step information if the auction
479 concerns an ascending clock auction.

480 **3.3.1.6 Credit limit**

481 The Transmission System Operator may inform the Auction Office of credit restrictions that
482 have been placed on Network Users in the context of a contract. The Auction Office
483 ensures that the cumulative purchase of auction products and secondary transactions does
484 not exceed the Network Users credit limit. (refer to section 3.2.6)

485 The credit limit information may be sent to the Auction Office at any time to enable more
486 conclusive verifications be carried out within the auctioning system.

487 At the end of every purchase the Auction Office provides the updated credit limit of all
488 relevant Network Users to the Transmission System Operator.

489 **3.3.1.7 Capacity bid**

490 Network Users submit bids in accordance with the type of auction being run. Before a
491 uniform price auction or an ascending clock bidding round closes they may submit
492 modifications to their bids or cancel the bid completely if the auction process allows it. (refer
493 to section 3.2.3.2)

494 **3.3.1.8 Allocated capacity**

495 The Auction Office allocates offered capacity to a Network User's bid and informs the
496 Network User of the quantity and price allocated according to the given auction process.
497 (refer to section 3.2.3.3)

498 **3.3.1.9 Detailed capacity allocated**

499 Once the capacity allocation has terminated the Auction Office transmits all the Network
500 User allocations to the Transmission System Operator. (refer to section 3.2.3.4)

501 **3.3.1.10 Aggregated auction results**

502 This represents the total aggregated values for the auction (at least the clearing price and
503 total capacity sold) and is intended for use by any market participant. (refer to section
504 3.2.3.4)

505 **3.3.1.11 Surrendered capacity sold**

506 When the Transmission System Operator receives the detailed results of the auction it
507 determines if the capacity sold is greater than the Transmission System Operator's available
508 technical capacity. If this is the case the Transmission System Operator allocates the
509 remaining sold capacity to the Network Users that have surrendered capacity. (refer to
510 section 3.2.3.1.1.5)

511 **3.3.1.12 Buyback requirements**

512 In the case where it is necessary to buy back capacity via an auction, the Transmission
513 System Operator determines how much capacity should be bought back and a cap price for
514 any purchases. (refer to section 3.2.4)

515 **3.3.1.13 Buyback auction bid**

516 The bidding procedure will be the generally the same as carried out for a uniform price
517 auction. Local market rules may determine that an ascending clock auction shall be used.

518 **3.3.1.14 Allocate buyback results**

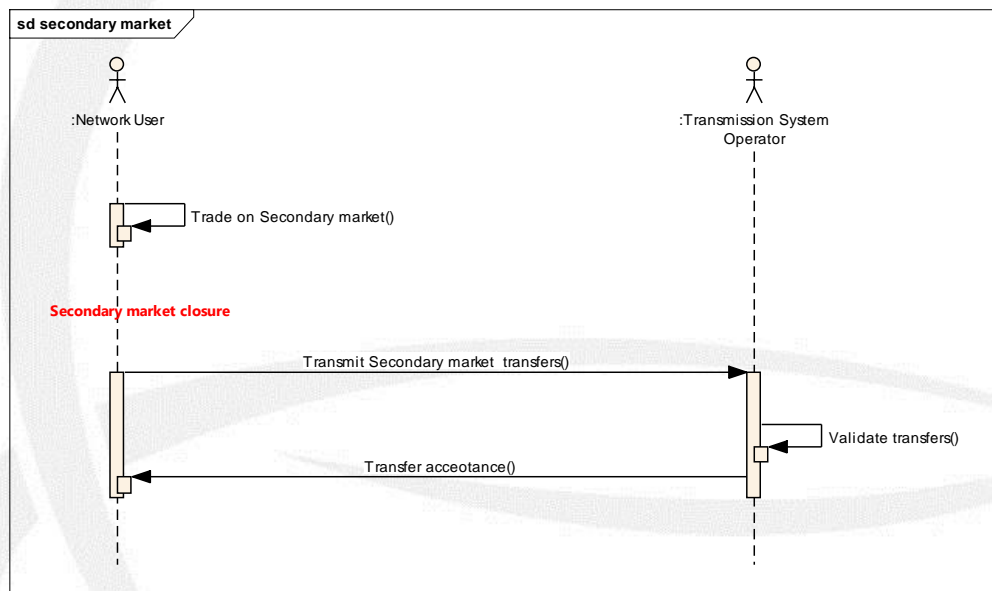

519 Once the buyback auction closes the Auction Office verifies the bids received and transmits
520 the verified bids to the Transmission System Operator.

521 The Transmission System Operator validates the bids received and sends the allocated bids
522 to the Auction Office. The Auction Office distributes the finalised results.

523 In the case where bundled capacity has been sold back the adjacent Transmission System
524 Operator is informed of the sale.

525 **3.3.2 Secondary market sales**

526 Capacity may be sold on a secondary market. Bundled capacity bought in an auction shall be
527 sold on the secondary market as bundled capacity. Unbundled capacity on both sides of an
528 interconnection point may be bundled in the secondary market.

529
530

Figure 10: Secondary market sequence

531 If capacity is sold on the secondary market the Registered Network User that sold the
532 capacity must inform the Transmission System Operator of the sale.

533 The Transmission System Operator validates the transfer information. Once the transfer
534 submission is deemed valid the Transmission System Operator confirms the transfer to
535 the new holder of the capacity.

536 In the case of error the Registered Network User is informed and takes the necessary
537 corrective action.

538 **3.3.3 CAM/CMP Workflow**

539 **3.3.3.1 General Acknowledgement process**

540 **3.3.3.1.1 Business process definition**

541 The acknowledgment business process is generic and can be used in all the energy market
542 business processes at two levels:

- 543 • System level: To detect syntax errors (XML parsing errors, etc.);
- 544 • Application level: To detect semantic errors (invalid data, wrong process, etc.).

545 If there is a problem encountered at the first level, then a technical acknowledgement may
546 be sent to inform the originator of the problem.

547 If errors are encountered at the second level or if the application can successfully process
548 the information, then an application acknowledgement may be sent to inform the originator
549 of the situation.

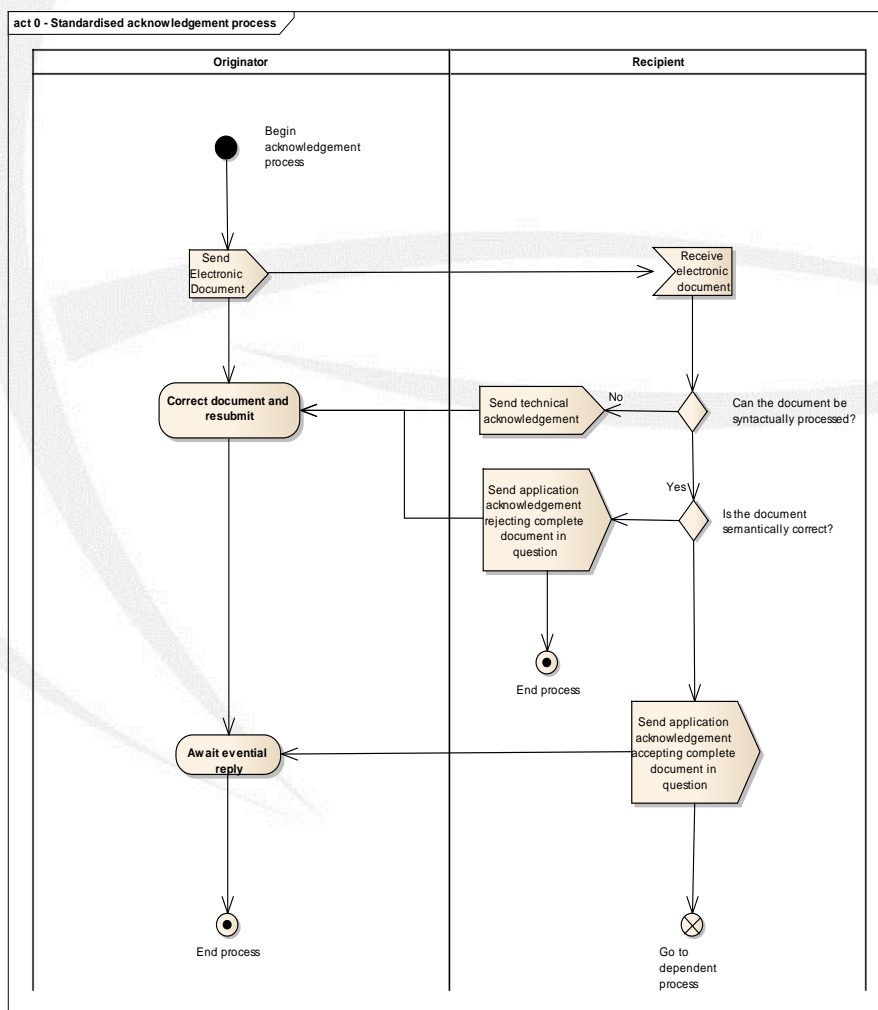

Figure 11 – Acknowledgement process

550
551

552 **3.3.3.1.1.1 Technical acknowledgment**

553 A technical acknowledgement occurs when an XML document is received that cannot be
554 correctly processed for submission to the application. Such an error could occur for example
555 whenever the XML parser cannot correctly parse the incoming document. Other instances
556 could be the incapacity to correctly identify the originator of the document in relation to the
557 process requested.

558 In such a case a technical acknowledgement can be sent to the document originator
559 providing the information that the XML document in question cannot be correctly processed
560 by the system.

561 **3.3.3.1.1.2 Application acknowledgment**

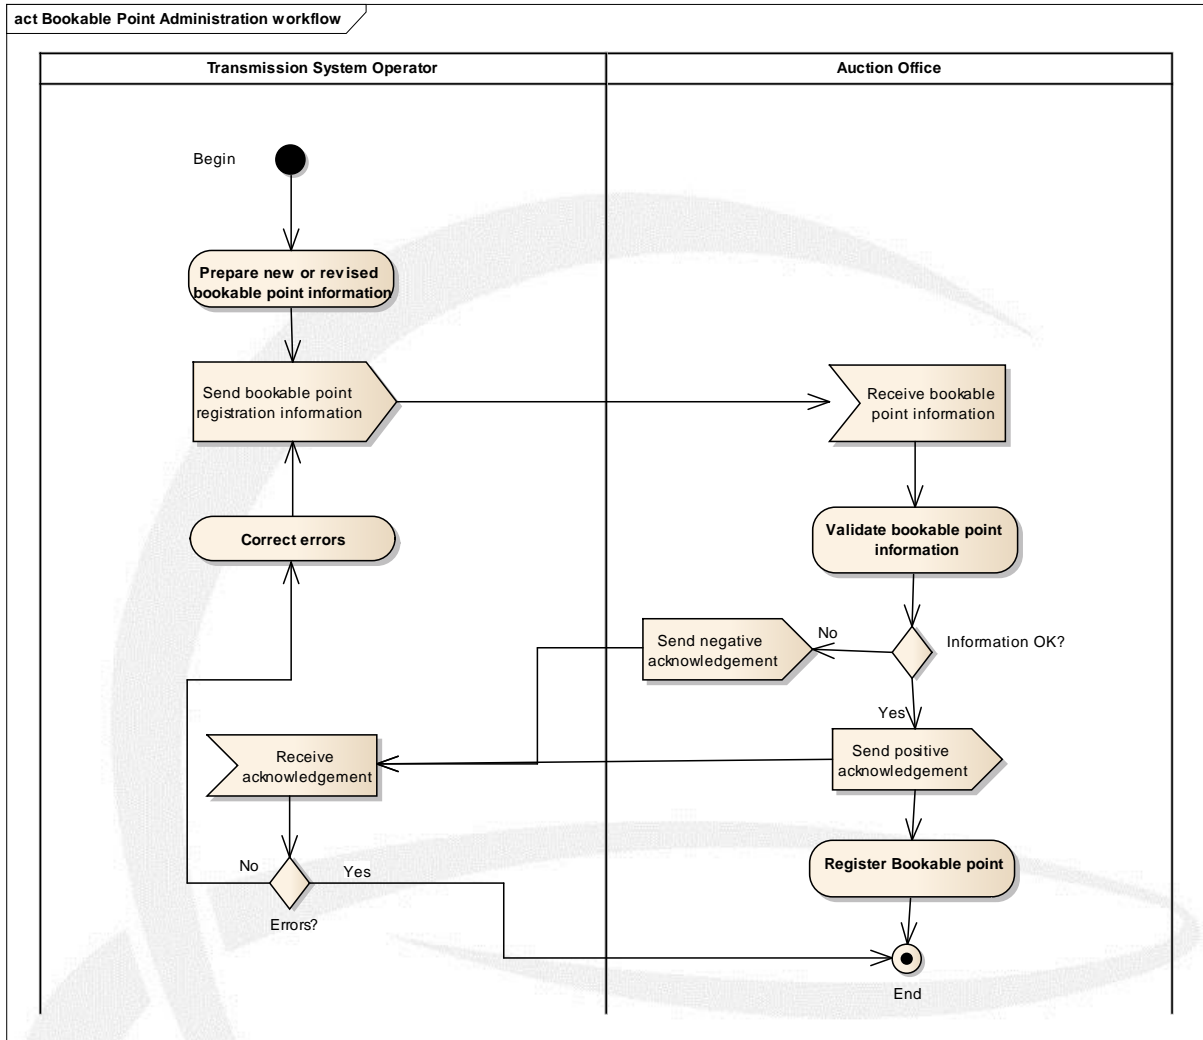

562 Within each business process of the gas market, business rules are to be defined stating
563 whether or not an application acknowledgment is to be sent upon reception of an electronic
564 document.

565 In particular, where the originator is in the role of a Transmission System Operator and the
566 recipient is in a “market participant” type role, all electronic documents sent by entities in
567 the role of a Transmission System Operator shall be considered as received and correct, and
568 the acknowledgement process is not required unless an acknowledgment document is
569 required for a specific purpose.

570 Otherwise, upon reception, checks are to be carried out at the application level to assess
571 that the received document can be correctly processed by the application. The originator is
572 informed that:

- 573
- 574 • Its document, that is stated as valid after this verification, is ready to be processed by
575 the reception of an acknowledgement document accepting the complete document
in question;
 - 576 • Its document is rejected for processing by the reception of an acknowledgement
577 document rejecting the complete document in question with details on the level of
578 errors.

579 **3.3.3.2 Bookable point Administration process**

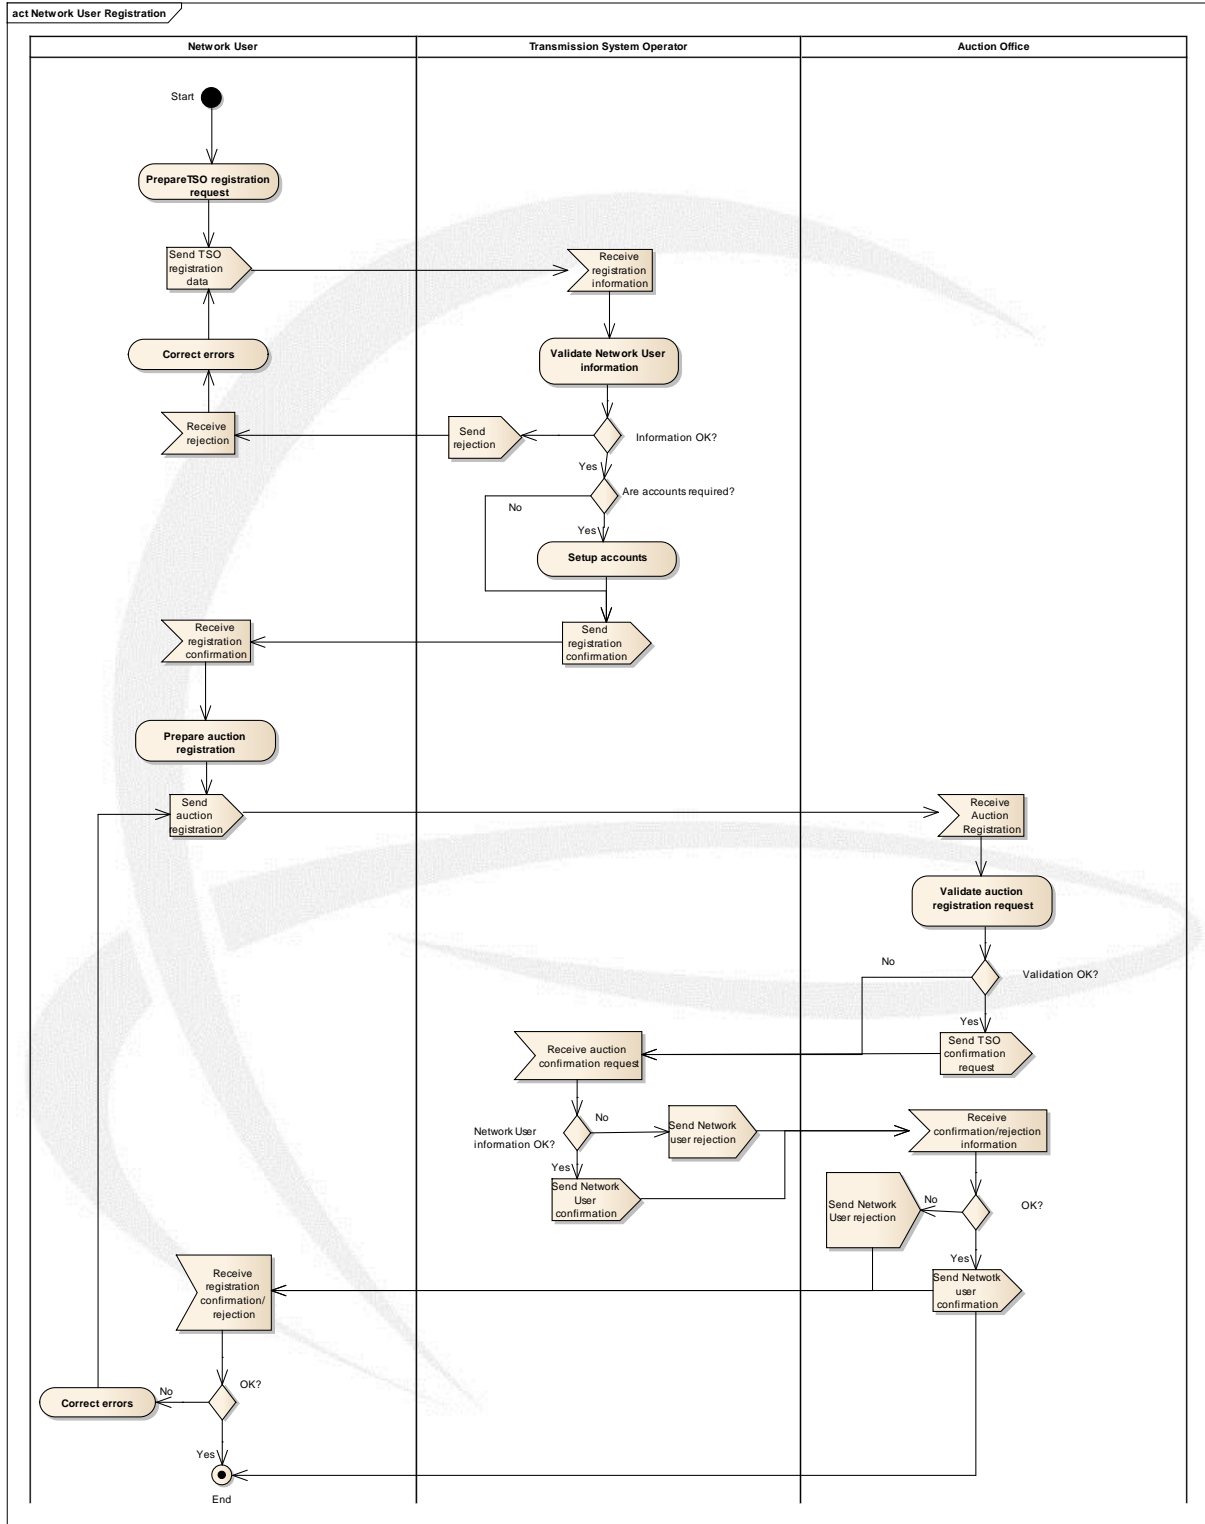

580
581

Figure 12: Bookable point Administration workflow

582 For the publication of Bookable points on the booking platform the Transmission System
583 Operator sends to the Auction Office the data for each Bookable point, where capacity is
584 going to be sold. This includes the data for a new Bookable point as well as data updates for
585 an existing and already published Bookable point.

586 **3.3.3.3 Network User Registration process**

587
588

Figure 13: Network User Registration workflow

589 The registration process begins with the submission of the Network user registration
590 information to the Transmission System Operator.

591 The Transmission System Operator validates the Network user information and if
592 accounts/balancing groups are required these are set up and communicated to the Network
593 user along with the acceptance of the registration.

594 The Network user prepares the auction registration which includes at least one authorized
595 person and one Transmission system operator identification and it may include
596 account/balancing group information.

597 The Auction office validates the registration data and once valid he requests the
598 validation/confirmation to the identified Transmission system operator.

599 The Transmission system operator confirms/rejects the confirmation request. Once
600 confirmed the registration information is then sent to the Network user.

601 **3.3.3.4 Offered capacity process**

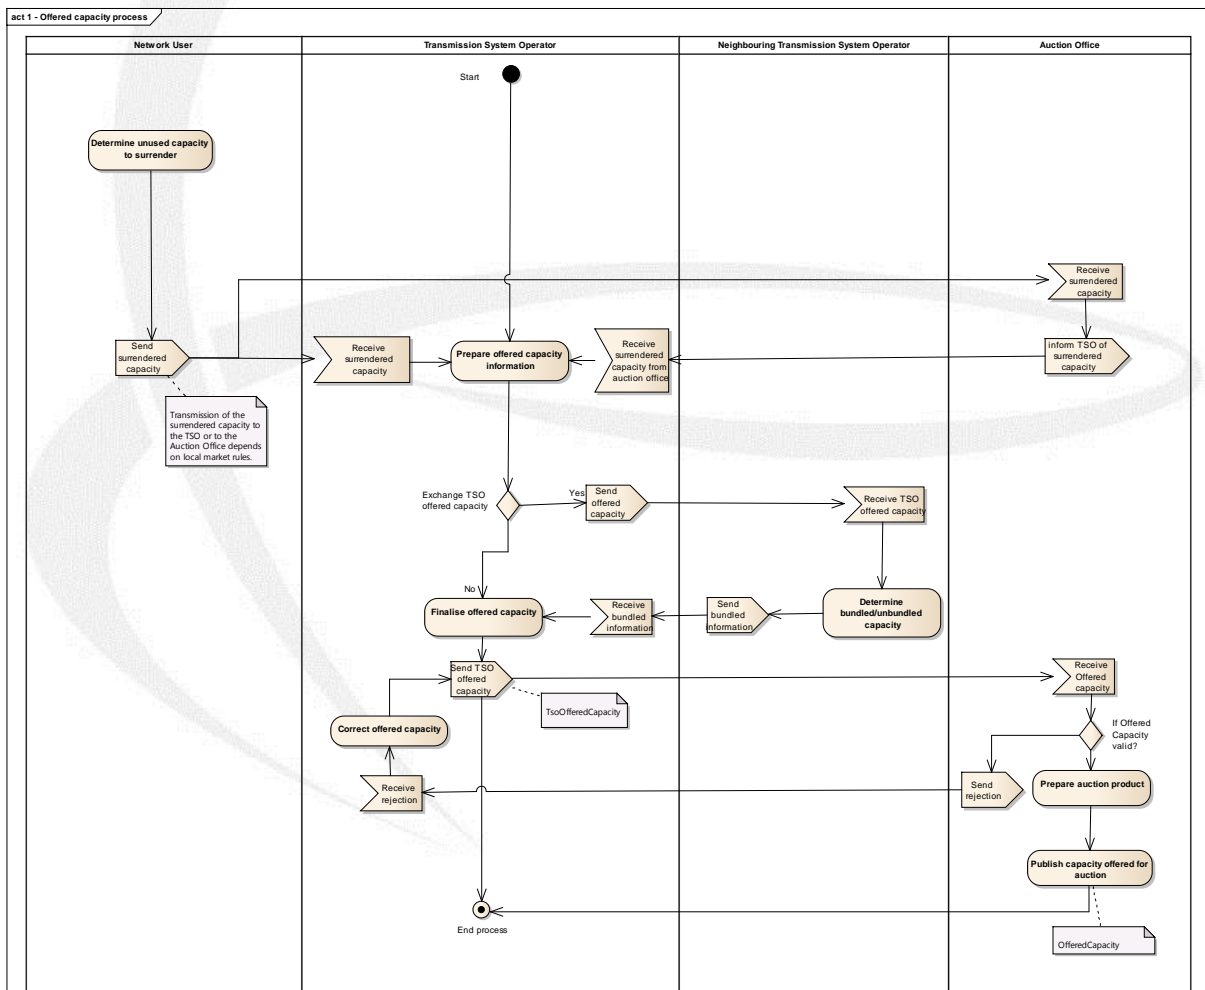

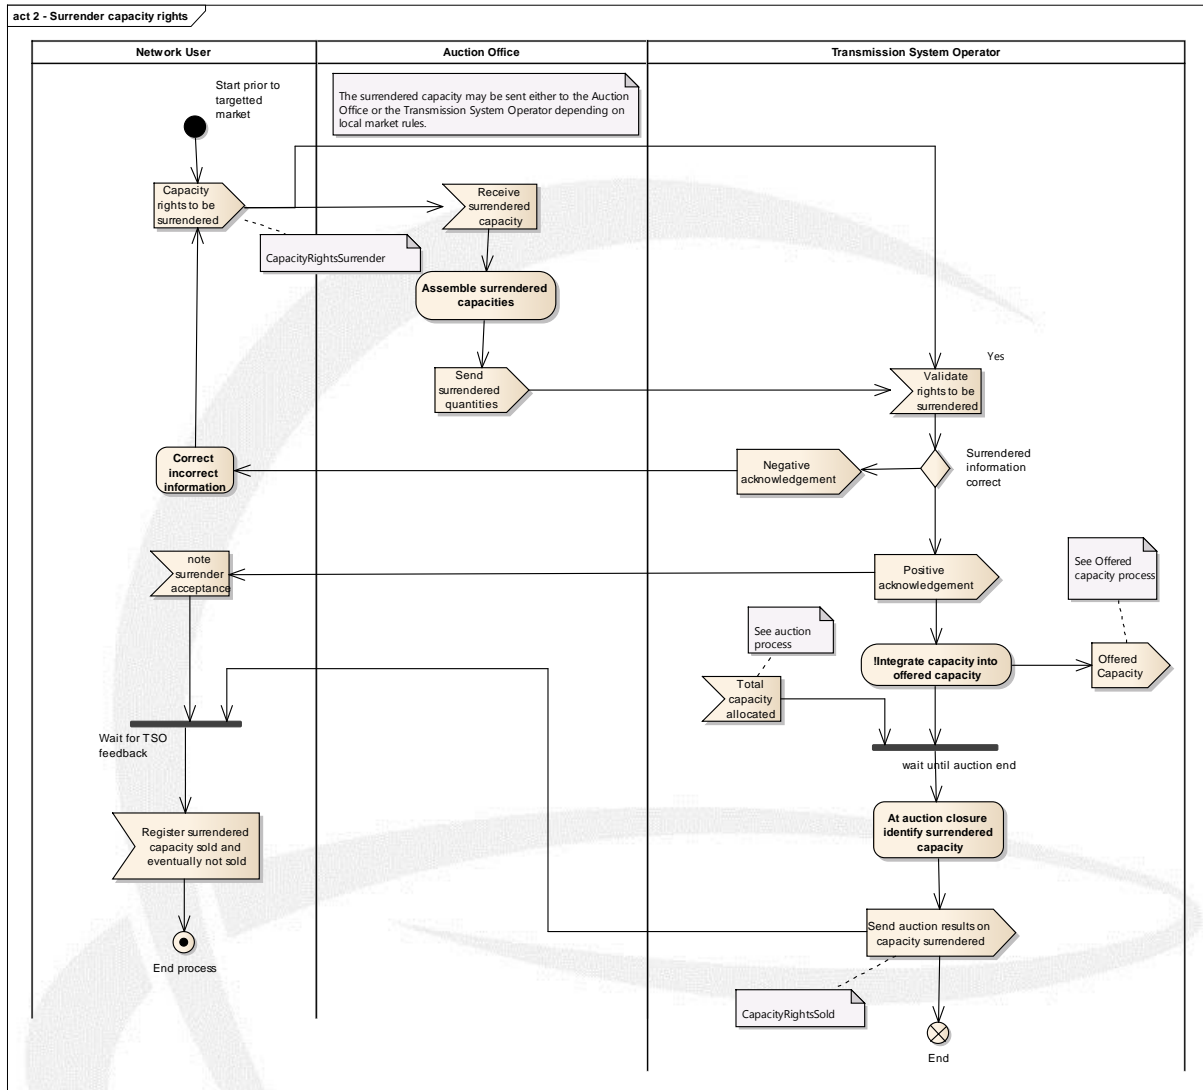

Figure 14: Offered capacity workflow

602
603

- 604 The determination of offered capacity begins on a cyclic basis depending on the standard
605 capacity product.
- 606 The Transmission System Operator(s) send(s) the offered capacity to the Auction Office
607 according to the options described in point 3.2.3.1.2.
- 608 For a given market situation a Transmission System Operator may provide the Auction Office
609 with credit limitations of the Network Users for the products to be auctioned or for
610 secondary transactions between Network Users. This information will be used by the
611 Auction Office to ensure the legitimacy of the bids and the secondary trades (only in the case
612 of Network Users that buy capacity).
- 613 The Auction Office then makes this offered capacity information available to the market in
614 the appropriate manner (web publication, download capability, etc..).

615 **3.3.3.5 Surrender capacity process**

616

617

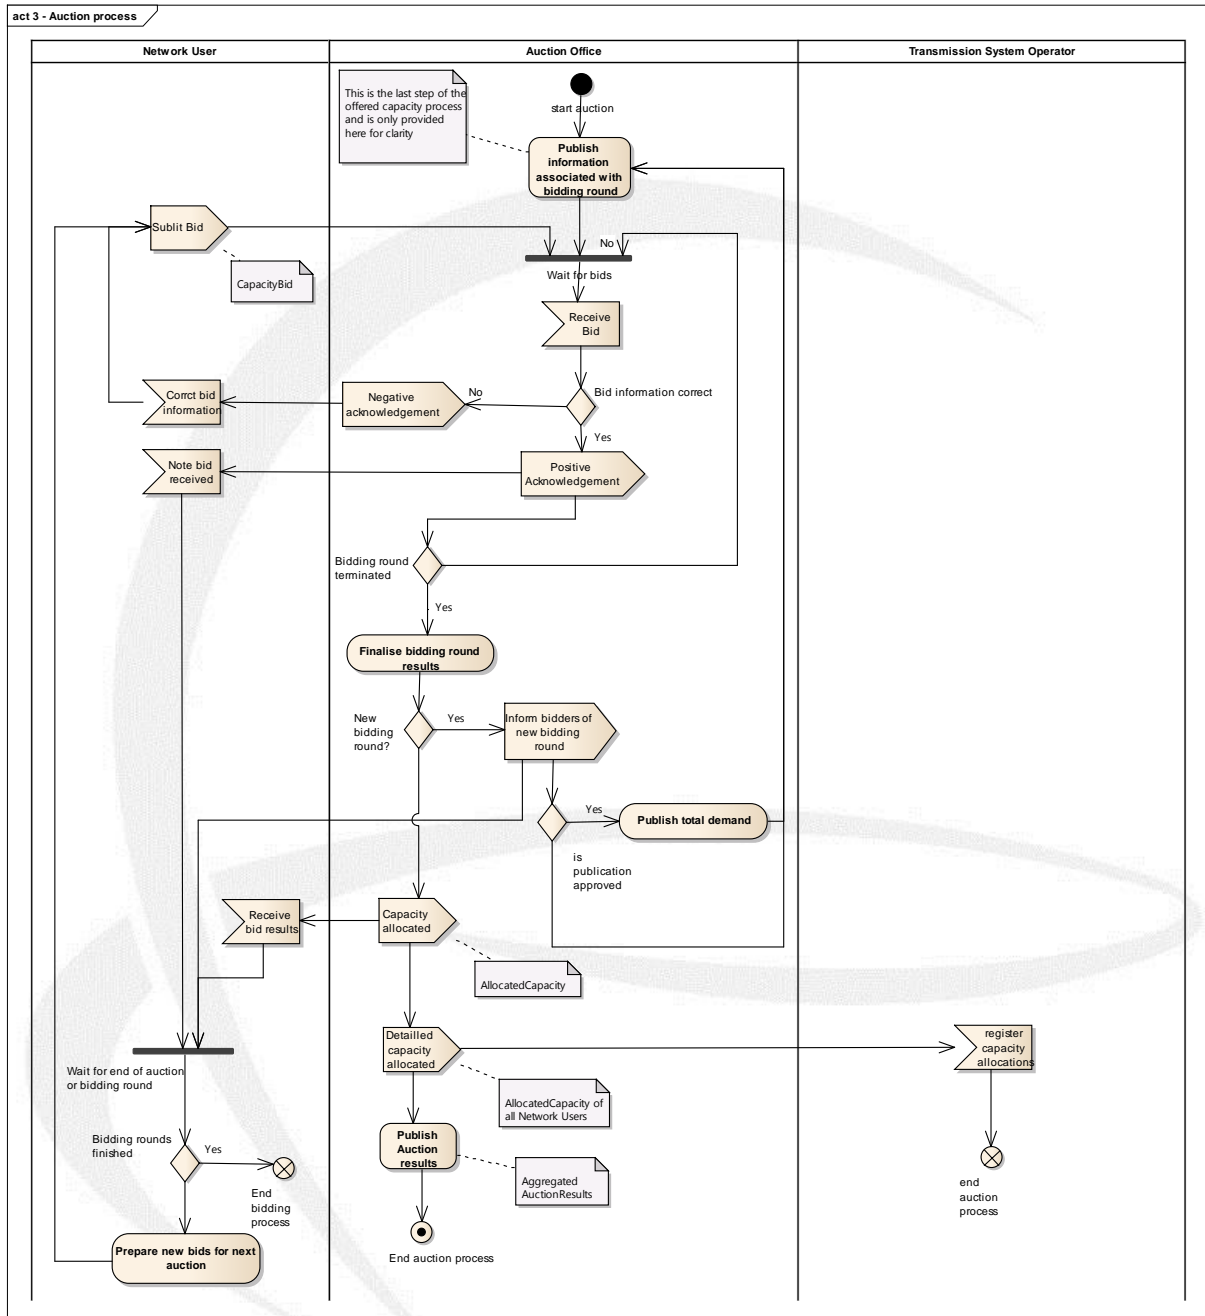

Figure 15: Surrender capacity process

618 If a Network User has more capacity than needed, the excess may be surrendered to the
619 Transmission System Operators or to the Auction Office who sends the assembled
620 surrendered capacities to the relevant Transmission System Operators for inclusion in the
621 offered capacity.

622 The Transmission System Operator will ensure that the capacity that has been surrendered is
623 correct (bundled capacity not split, capacity available, etc). If everything is in order the
624 capacity is integrated into the offered capacity.

625 When the auction is completed, the Transmission System Operator determines the part of
626 the surrendered capacity that has been sold and informs the Network User of the outcome.

627 **3.3.3.6 Auction process**

628
629

Figure 16: Auction workflow

630 Once the Auction Office has published the offered capacity to be auctioned, and the auction
631 has opened, the Network User may submit bids to the Auction Office.

632 The Auction Office validates each bid and informs the bid submitter of the outcome of the
633 validation process. In the case of a rejection, the Network User may correct the bid
634 information and resubmit it to the Auction Office before the bidding round closure.

635 In the case of the bid being successfully validated the Network User awaits the outcome of
636 the auction. However, during the bidding round it is possible for the Network User to submit
637 additional bids in the case of uniform price auctions, to make modifications to existing bids
638 or to cancel an existing bid.

639 The Auction Office manages the bids received and any changes provided until the bidding
640 round closes.

641 Once the bidding round closes, the Auction Office determines the situation between the
642 capacity requested and the capacity offered.

643 If, in the case of an ascending clock auction, there is a situation of excess demand the
644 Auction Office initiates another bidding round with a new price step.

645 A Transmission System Operator can send to the Auction Office a request to cancel an
646 ongoing auction due to a force majeure. The Auction Office cancels the auction and informs
647 all involved Network Users about the auction cancellation.

648 Prior to beginning the new bidding round, the Network Users that participated in the
649 previous bidding round are informed that a new bidding round will take place with a new
650 price step. In addition information on the previous bidding round may be published if this is
651 authorised by the Transmission System Operators.

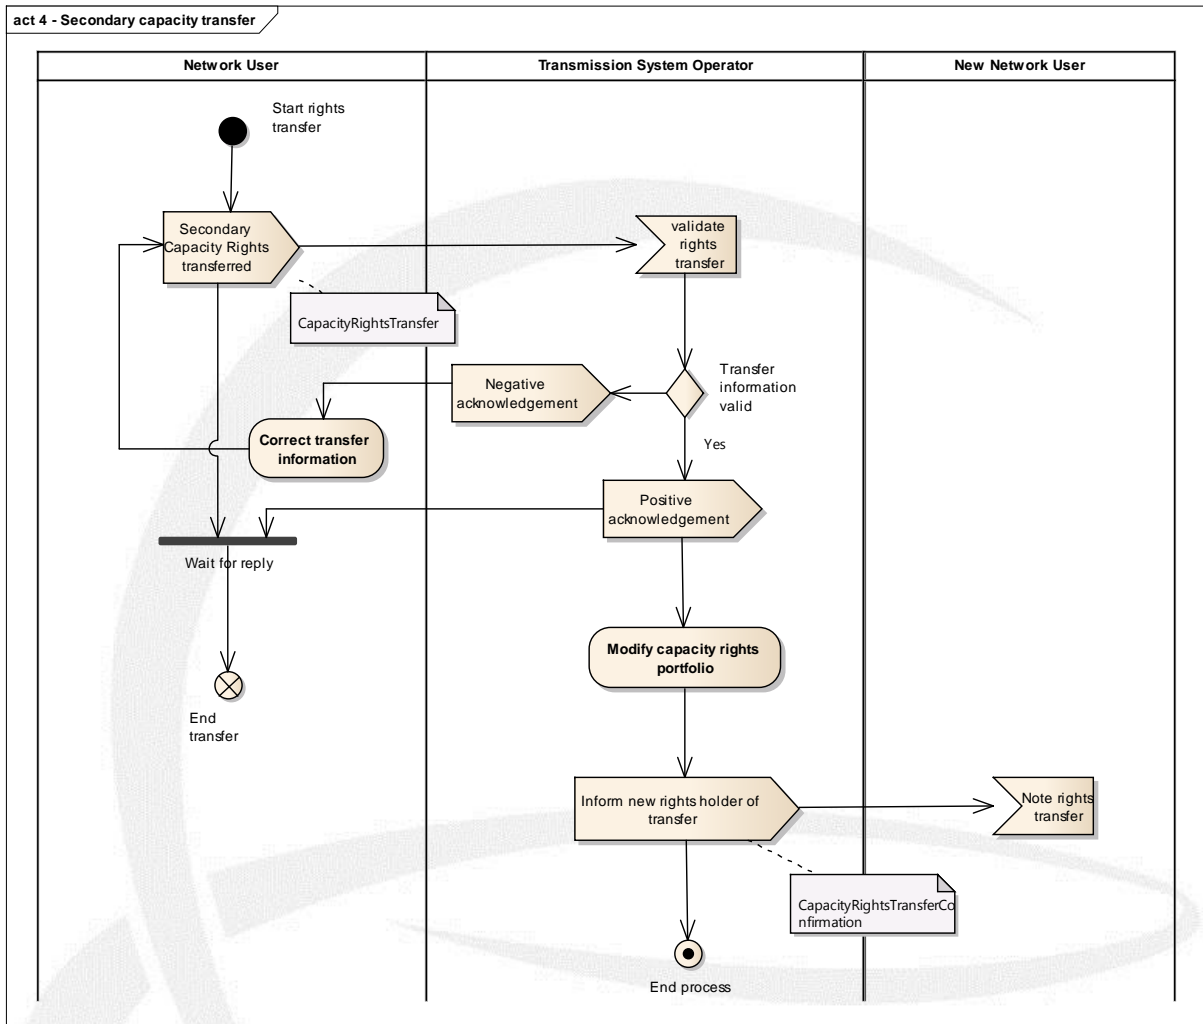

652 At the closure of the auction, the Auction Office allocates the capacity respecting market
653 rules and informs each Network User of the outcome of the auction. The Auction Office also
654 provides the complete list of allocations to the Transmission System Operators.

655 In a final step the Auction Office publishes the results of the auction.

656 The bidding in the buyback auction takes place in a similar fashion as an ordinary auction.
657 When the auction closes the Auction Office processes all the bids and then may provide the
658 list of validated bids to the Transmission System Operator. In this case the Transmission
659 System Operator verifies the bids received and provides to the Auction Office the list of
660 successful bids.

661 The Auction Office then informs the Network Users of their successful bids.

662 **3.3.3.7 Secondary market transfer process**

663
664

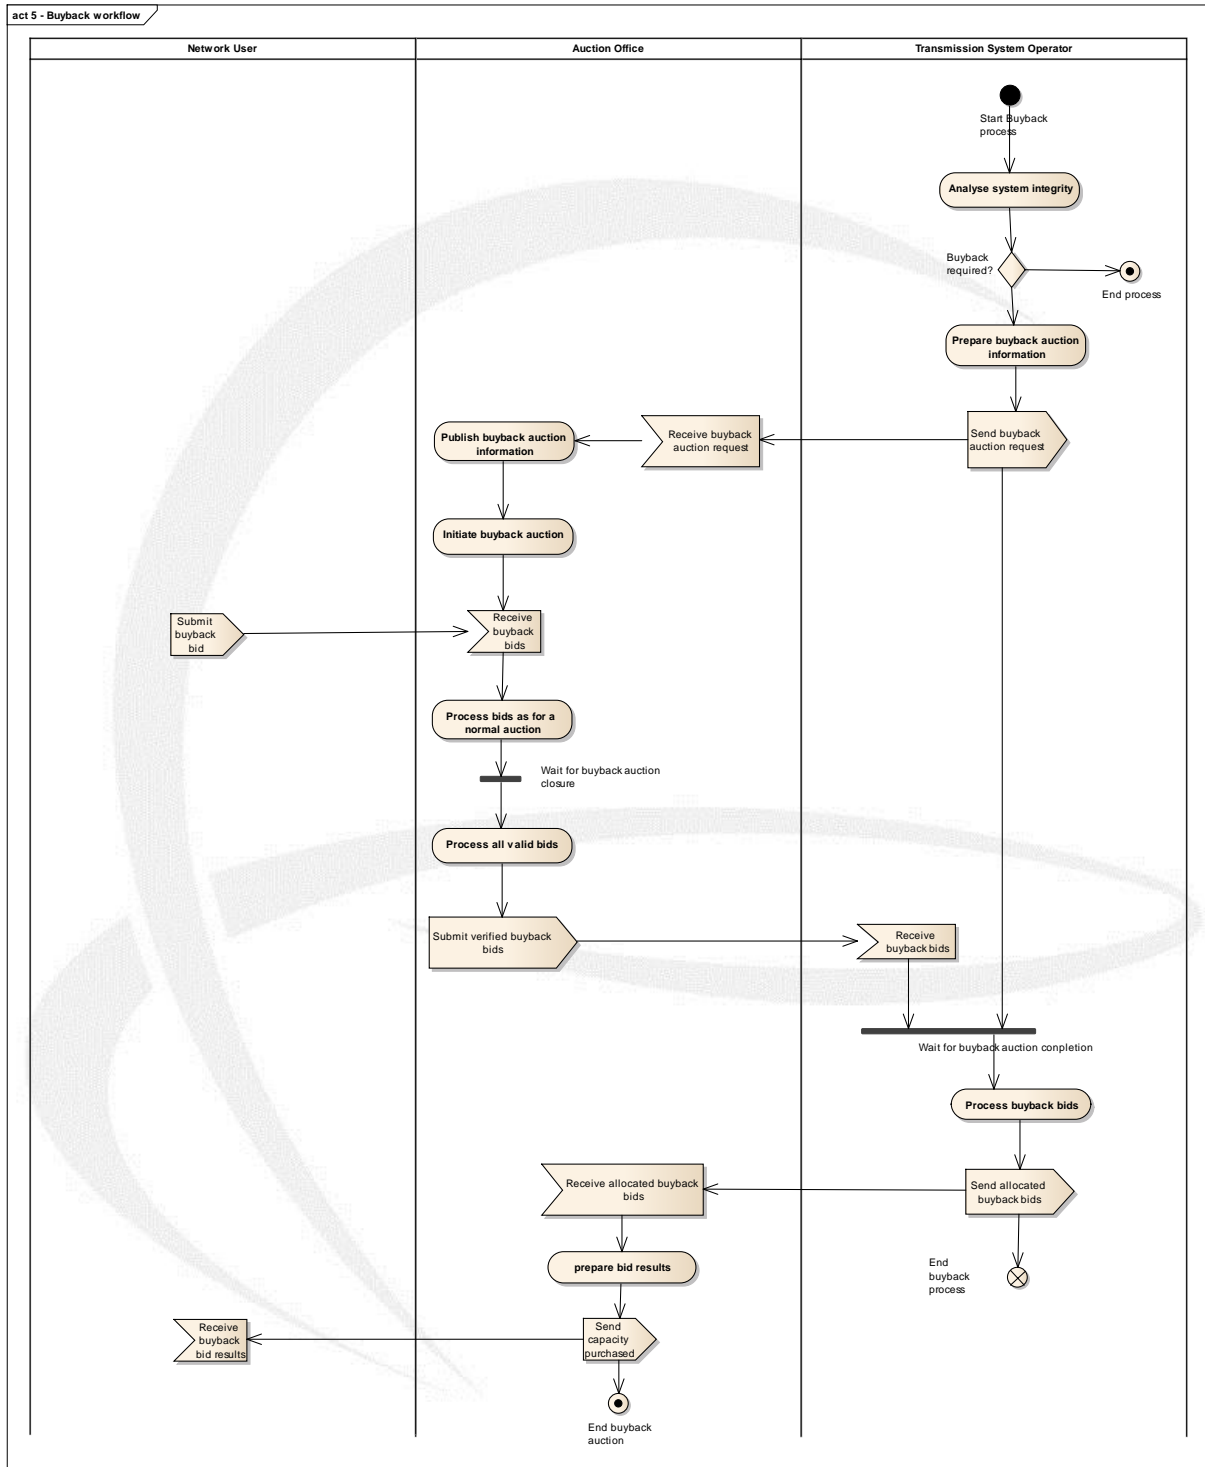

Figure 17: Secondary market transfer process

665 A secondary market transfer process may take place where Network Users and eventually
666 Transmission System Operators (in the case of buyback), may trade the capacity that has
667 been acquired.

668 The Transmission System Operator must be informed of all trades by either the Network
669 Users or the Auction Office on their behalf.

670 The transmission System Operator validates the transfer and when successful informs
671 directly or through the Auction Office the new capacity rights holder of the capacity that has
672 been transferred.

673 **3.3.3.8 Buyback process**

674
675

Figure 18: Buyback workflow

676 The Transmission System Operator analyses if there is sufficient technical capacity in the
677 network to handle the nominations provided by the Network Users.

678 In the case where there is insufficient technical capacity an oversubscription situation exists
679 and the Transmission System Operator must initiate a buyback process in order to align the
680 network requirements with the technical possibilities.

681 Once the amount of overcapacity is determined the Transmission System Operator informs
682 the Auction Office of the amount to be bought back from the market.

683 The buyback auction process then takes place as defined within the auction process. The
684 only deviation from the auction process may be the introduction of the transmission of the
685 bid information to the Transmission System Operator prior to the publication of the
686 allocation results in order to ensure that the bid respects local market rules.

687 As an alternative to a buyback auction the Transmission System Operator may buy back the
688 capacity acting in the role of a Network User on the secondary market.

689 **3.4 Information model requirements**

690 The following information requirements have been identified as the essential but not
691 exhaustive business information that needs to be catered for in the relevant information
692 exchanges.

693 **3.5 Definitions of the attributes used in all the models**

Name	Description
Account	The identification of an account assigned by a Transmission System Operator or by Market area coordinator to a Network User used for capacity and balancing accounting. This is also known as a Balancing Group.
AllocationIdentification	The identification of the contractual reference under which the capacity was assigned by an Auction Office.
AuctionIdentification	The identification of the auction where the capacity rights were offered. In ascending clock auctions this is a unique identification for each bidding round.
AvailabilityType	The identification of the type of availability of the capacity. (e.g. firm or interruptible)
BiddingRound	The identification of the auction round where the capacity rights were allocated in an ascending clock auction. A Uniform Price Auction consists of a single bidding round.
BiddingRoundPrice	The price that has been established for a given bidding round
BidIdentification	The identification of the bid submitted by the Network User. The Network User assigns this identification.
BidPrice	The price bid for the capacity requested. The price bid may be either a fixed or a floating amount depending on the tariff arrangements in place.

Name	Description
BookablePoint	A bookable point is defined as the identification of a (inter)connection point, the direction of the flow and type of gas.
BookablePointType	The type of the bookable point such as LNG, storage, transmission, production and supply
BookingCosts	The costs associated with the capacityallocation. ()
CapacityAmount	The amount of capacity specified for the period.
CapacityAmountAllocated	The amount of capacity allocated to a bid.
CapacityAmountSold	The amount of capacity rights that have been sold in an auction, aggregated across all Network Users.
CapacityAmountSurrendered	The amount of capacity that have been surrendered by a Network User to a Transmission System Operator to be presented for sale on an auction.
CapacityAmountTransferred	The amount of capacity that has been transferred between Network Users on the secondary market
CapacityType	Identification of way in which the capacity rights have been packaged (i.e. Bundled, unbundled).
ClearingPrice	The price that successful Network Users shall pay at a specific auction. It is determined as set out in sections 4.10 19) (in an ascending clock auction) and 4.11 11) (in a uniform price auction) of the CAM NC.
CompetingProductCharacteristic	The characteristic of a product that is to be placed in competition in an auction.
ConnectionPoint	The point where gas sale/purchase/trade/transfer may take place.

Name	Description
ContactType	The type of a Network User contact such as dispatching, trading and invoicing.
ContractReference	The reference of a Transmission System Operator assigned contract.
CreditAmount	The amount of a credit limit.
Currency	The identification of a currency as defined in ISO 4217.
eMail	An electronic mail address
FlowDirection	The identification of the entry network and the exit network. This can be represented by the "to and from TSO" or "to and from Market area"
FromTso	The TSO where the gas is exiting the network
FromMarketArea	The Market area where the gas is exiting the network
FrameworkIdentification	Identification code for the framework that represents a combination of products and multiplication factors for the calculation of a credit limit
FrameworkName	The name of a credit limit framework
GasType	The type of gas which may be H-gas or L-gas.
InterConnectionPoint	A physical or virtual point connecting adjacent entry-exit systems or connecting an entry-exit system with an interconnector, in so far as these points are subject to booking procedures by network users.
InterConnectionPointIdentification	The identification of an InterConnection Point

Name	Description
InternalAccountIdentification	The identification of an account (balancing group) managed by a Transmission System Operator for a Network User that is registered in the Transmission System Operator's area.
MarketArea	A market area represents the virtual merger of transmission systems and downstream distribution systems to form a single balancing zone. In this respect, market areas are comparable to trading zones.
MinimumCapacityAmount	The Minimum Amount of Capacity for the respective Standard Capacity Product which the Network User is willing to be assigned. (origin: CAM NC)
MobileTelephoneNumber	The telephone number of a wireless handheld device that allows users to make calls and send text messages, among other features.
MultiplicationFactor	The factor that is used to multiply the value of a Network User credit limit to establish the credit limit for a given product type.
NetworkUserIdentification	The identification of a Network User that has acceded to and is compliant with all applicable legal and contractual requirements that enable him/her to book and use capacity on the relevant Transmission System Operators' network under a Capacity Contract (origin: CAM NC)

Name	Description
OfferedCapacity	<p>Offered capacity for auction is composed of:</p> <ul style="list-style-type: none"> • technical capacity - the maximum firm capacity that the Transmission System Operator can offer to Network Users, taking account of system integrity and the operational requirements of the transmission network • Additional capacity offered in addition to the technical capacity made available through one of the congestion management procedures. Such capacity corresponds to an oversubscription of the firm capacity • Less Previously sold capacity - less <ul style="list-style-type: none"> • the Surrendered capacity which corresponds to the surrender by a Network User of firm capacity which is contracted by the Network User at an interconnection point. • And the Long term or firm day ahead capacity that has been withdrawn through the application of the UIOLI mechanism
OfficeTelephoneNumber	The telephone number of a standard telephone in an office that is wired to a telephone line.
Period	The period covered for the capacity amount in question.
PostalAddress	The address (of a person or business) to which mail is delivered, as distinct from the actual street address.
PriceSteps	The identification of a series of monetary amounts which are used in a progressive manner in ascending clock auction bidding rounds to determine the auction price. Both a large price step and a small price step shall be defined for each auction.

Name	Description
ProductIdentification	The identification of a credit limit product that has a multiplication factor.
Rate	A measure of a part with respect to a whole; a proportion expressed as a percentage.
ReservePrice	The minimum eligible floor price in the auction, being equal to the Regulated Tariff.
SequenceIdentification	A sequential number distinguishing one entity from another.
StandardCapacityProductType	the duration of the standard capacity product: yearly, quarterly, monthly, daily or within-day
Status	The condition of an object (e.g. Auction, Network User, Bookable point)
ToTso	The TSO where the gas is entering the network
ToMarketArea	The Market area where the gas is entering the network
TransfereIdentification	The identification of a Network User that has bought transferred capacity rights on the secondary market
TransferorIdentification	The identification of a Network User that has transferred capacity rights on the secondary market
TransmissionSystemOperatorIdentification	The identification of a Transmission System Operator.
TsoPriceCap	The price limit that a Transmission System Operator is willing to pay for capacity in a buyback auction
UnitOfMeasure	The unit of measure in which the capacity amount is expressed.
UnitOfPrice	The unit of measure in which the price is expressed

Name	Description
ValidityPeriod	The period of validity of a credit limit.
VatCode	The value added tax code assigned by a national organisation.

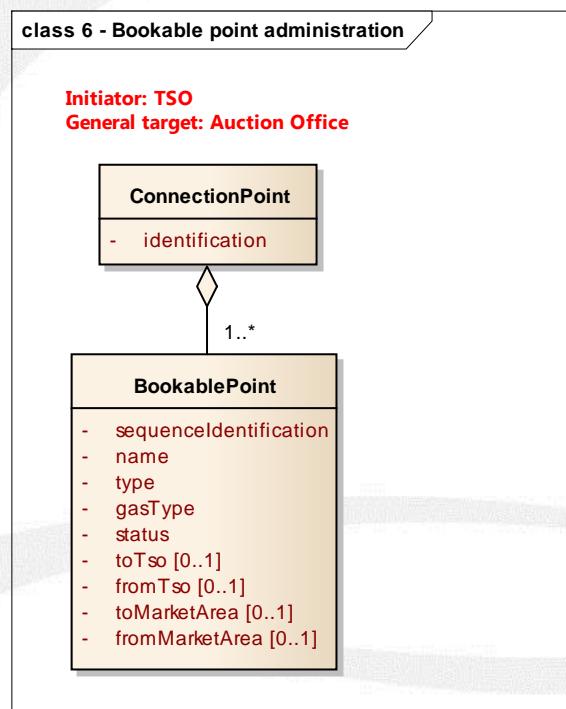

694 **3.6 Requirements per process**

695 Note 1: wherever the indication [0..1] appears against an attribute this signifies that the
696 attribute in question is optional. For example, the attribute “PriceSteps [0..1]” is not used in
697 the case of uniform price auctions.

698 Note 2: The information outlined in the class diagram does not represent any structural
699 constraints. It only represents the information requirements for a given information flow.

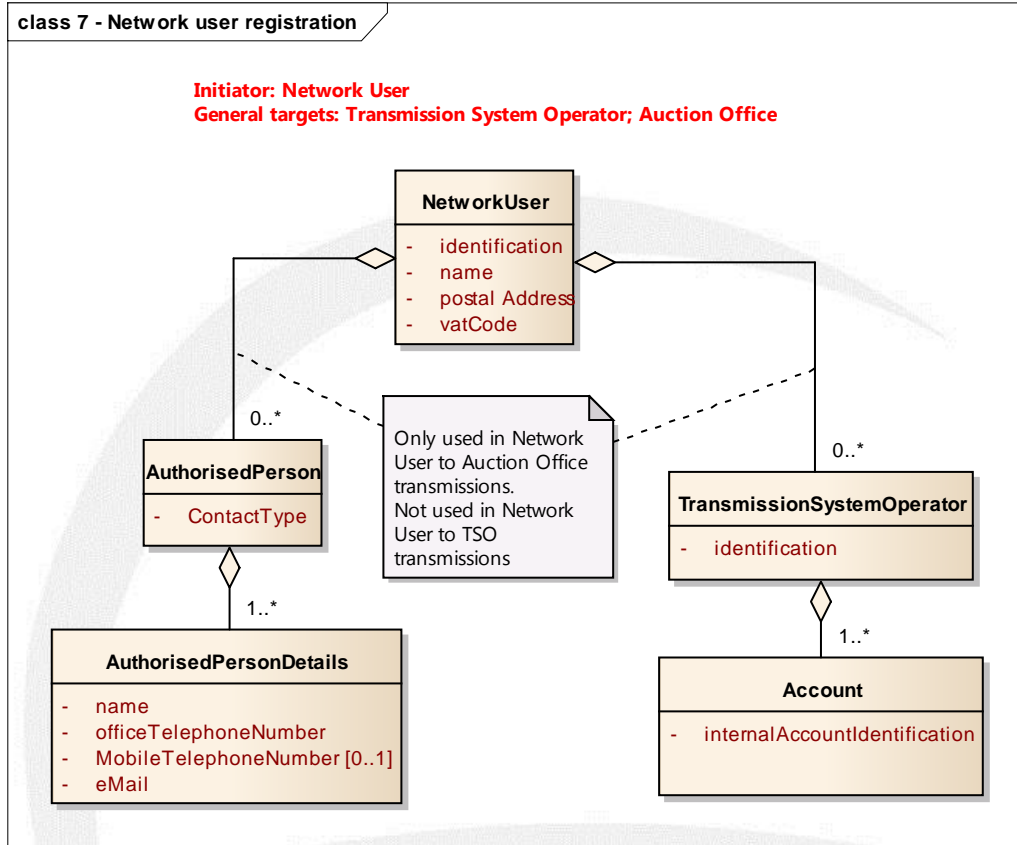

700 **3.6.1 Bookable point administration process**

737 **3.7 Business rules**

738 The diagram below shows the key business rules set out in the CAM network code that apply
739 to the allocation of capacity via auctions. The exact timings for each auction will be set out in
740 an auction calendar published annually by ENTSG.

741

742

743

Figure 34: Basic business information constraints

744 **3.8 Definition of terms**

745 **Uniform price auction:** an auction in which the Network User freely bids price as well as
746 quantity and all Network Users, who are successful in gaining capacity, pay the price of the
747 lowest successful bid.

748 **Ascending clock auction:** an auction in which a Network User places requested quantities
749 against defined price steps, which are announced sequentially.

750
