

Press Release

ENTSOG publishes new edition of Transmission Capacity Map (2019)

(Brussels, 29 October 2019, PR189-19) **ENTSOG today publishes a new edition of its Transmission Capacity map, providing an overview of Europe's main high pressure transmission lines and giving information on technical capacity at cross-border points.**

The Transmission Capacity Map offers an extensive and up-to-date overview of the transmission capacities currently offered in the European gas systems as of January 2019.

The map is covering capacities at cross-border points on the primary market, indicating for each whether the point offers a physically bidirectional or virtual backhaul capacity. Additionally, virtualised points and Market Areas are now also included and indicated explicitly on the map. The map content is aligned and based on data provided through the ENTSOG Transparency Platform available at <https://transparency.entsog.eu>

Jan Ingwersen, ENTSOG General Director, said, *"The Transmission Capacity Map has developed into a highly appreciated information tool. It provides a comprehensive overview of the gas transmission network in and adjacent to the EU."*

The Transmission Capacity Map can be ordered [here](#).

Should you require any further information, please contact Carmel Carey (+32 2 894 5136, ENTSOG.Communications@entsog.eu).

Editorial notes

- > ENTSOG was founded on 1 December 2009 in line with Regulation (EC) 715/2009. The current number of Members, Associated Partners and Observers can be found [at this link](#).
