

Press Release

ENTSOG publishes its Final Guidelines for Project Inclusion (TYNDP 2024)

(Brussels, 16 October, PR0302-23) **Today, ENTSOG published its final Guidelines for Project Inclusion (GPI) for the Ten-Year Network Development Plan 2024 (TYNDP 2024). The GPI provides guidance to the project promoters on the procedural steps, and administrative and technical requirements, that promoters and projects have to meet to be included in the TYNDP 2024.**

ENTSOG published the draft GPI on 12 September, for public consultation. The final GPI published today considers the European Commission (EC) and ACER recommendations as required by Annex III.2(5) of the revised TEN-E Regulation, as well as stakeholders' feedback to the public consultation. The final GPI includes a consultation report that summarises the feedback received and includes stakeholders' responses to the consultation.

In addition, and in preparation for the TYNDP 2024 project data collection, a User Handbook, which facilitates the submission of projects by providing a step-by-step explanation of the project portal and the project collection process, is planned to be published at the end of October.

Furthermore, ENTSOG plans to launch the project collection process for the TYNDP 2024 at the beginning of November 2023 following the publication of the project promoter handbook. An informative webinar to assist promoters with project submissions and to present the project collection handbook will take place. Details for registration to this webinar will be made available to stakeholders on the ENTSOG website shortly.

The final GPI report and annex II (consultation report) are available on ENTSOG website [here](#).

Submission to ENTSOG TYNDP 2024 is a prerequisite for PCI/PMI application for hydrogen infrastructure projects, as required by the revised TEN-E.

Should you require any further information please contact external Communications Manager, Ms. Carmel Carey, at ENTSOG.Communications@entsog.eu.

Editorial notes

- > **The European Network of Transmission System Operators for Gas (ENTSOG)** was founded in line with Regulation (EC) 715/2009 and has played a key role in facilitating integration of the European gas markets, ensuring technical interoperability and providing security of supply by gas infrastructure planning. Looking forward, ENTSOG is contributing to the net-zero decarbonisation by 2050, in particular, by the integration of renewable and low carbon gases via future-proof gas transmission pipelines, in line with the EU energy and climate goals. More information on ENTSOG can be found on our website – www.entsog.eu or contact info@entsog.eu.
