

Press Release

ENTSOG publishes its Annual Work Programme 2024

(Brussels, 19 December, PR0311-23) **Today, ENTSOG published its Annual Work Programme (AWP) 2024, as required by Regulation (EC) 715/2009. This document outlines ENTSOG's expected activities and deliverables for the year ahead.**

Looking at priorities for 2024, ENTSOG and its Members will fulfil the requirements of Regulation (EU) 2022/869 on Guidelines for Trans-European Energy Infrastructure (TEN-E), including the finalisation of the TYNDP 2024 scenario development process. In parallel, work on TYNDP 2024 will proceed, with the team also working to adapt the ENTSO-E/ENTSOG Consistent and Interlinked Model.

ENTSOG will focus on strategic topics, specifically those required to facilitate the repurposing, retrofitting and refurbishment of the gas grids for the transport of renewable and low carbon gases. Gas quality handling, as well as security of supply and regional cooperation, will remain core themes for ENTSOG in 2024. The team will also assess the potential impact for gas TSOs of the EU's industrial policy and upcoming strategy for EU Carbon Capture Utilisation and Storage (CCUS).

Most significantly, ENTSOG will undertake the necessary activities required within the regulatory framework of the Hydrogen and Decarbonised Gas Markets package, expected to come into force in 2024.

ENTSOG General Director, Piotr Kuś, commented, *“Co-legislators working on updated EU rules for decarbonised gases and creation of a hydrogen market have decided that ENTSOG has a clear future role in the repurposing of the gas grids, and have indicated our continued involvement in a number of processes supporting the transition. We look forward to the formal adoption of this important legislative file.”*

The Annual Work Programme 2024 is available [here](#).

Editorial notes

- > **The European Network of Transmission System Operators for Gas (ENTSOG)** was founded in line with Regulation (EC) 715/2009 and has played a key role in facilitating integration of the European gas markets, ensuring technical interoperability and providing security of supply by gas infrastructure planning. Looking forward, ENTSOG is contributing to the net-zero decarbonisation by 2050, in particular, by the integration of renewable and low carbon gases via future-proof gas transmission pipelines, in line with the EU energy and climate goals. More information on ENTSOG can be found on our website – or contact info@entsog.eu.
