

## Press Release

## ENTSOG publishes the Capacity Allocation Mechanisms (CAM) Network Code 'Capacity Auction Calendar' for 2025/2026

(Brussels, 20 December, PR336-24) The 'Auction Calendar' for 2025/2026, containing information on specific capacity auctions, is now available on ENTSOG's website.

The Network Code on Capacity Allocation Mechanisms requires ENTSOG to publish an Auction Calendar by each January for auctions taking place from March through February of the following year. This calendar provides all relevant timings for auctions, including starting dates and standard capacity products to which they apply.

Key auction dates for firm capacity are:

- Annual yearly capacity auction 7 July 2025.
- Annual quarterly capacity auctions 4 August 2025, 3 November 2025, 2 February 2026, and 4 May 2026.
- Rolling monthly capacity auctions third Monday of M-1, with several exceptions, in particular if the date corresponds with a European public holiday, or in case the application of rules to set the dates for firm and interruptible auctions results in auction dates too close to each other. In this case, the auction dates for firm or interruptible capacity will be adjusted by one day or one week.
- Rolling day-ahead capacity auctions D-1, 14:30 (UTC) during daylight saving time, 15:30 (UTC) during wintertime.
- Within-day capacity auctions each hour for the period starting from +4 hours until the end of the gas day.

Dates for interruptible capacity auctions are also included and must be considered as the European standard defaults. The **Auction Calendar for 2025/2026** is available <u>here</u>.

Should you require any further information please contact external Communications Manager Ms. Carmel Carey at <a href="mailto:ENTSOG.Communications@entsog.eu">ENTSOG.Communications@entsog.eu</a>).

## **Editorial notes**

> The European Network of Transmission System Operators for Gas (ENTSOG) was founded in line with Regulation (EC) 715/2009 and has played a key role in facilitating integration of the European gas markets, ensuring technical interoperability and providing security of supply by gas infrastructure planning. Looking forward, ENTSOG is contributing to the net-zero decarbonisation by 2050, in particular, by the integration of renewable and low carbon gases via future-proof gas transmission pipelines, in line with the EU energy and climate goals. More information on ENTSOG can be found on our website – or contact info@entsog.eu.
