

## *Press Release*

### ***ENTSOG publishes its Annual Report 2024***

(Brussels, 29 April, PR0343-25) **Today, ENTSOG publishes its Annual Report 2024, which provides a retrospective of ENTSOG's work and deliverables for the previous year and explains the activities vis-à-vis ENTSOG's Annual Work Programme.**

This is the first ENTSOG Annual Report to reflect various new tasks within the new legislative framework of the Hydrogen and Decarbonised Gas Market Package, e.g., Regulation (EU) 2024/1789. For the first time, ENTSOG developed and published the Gas Quality Monitoring Report in December 2024. The Annual Report also includes a new section, which provides an assessment on injection of renewable and low-carbon gases into the gas network.

The new Regulation requires that additional gas quality parameters are published on the ENTSOG Transparency Platform (TP). Throughout 2024, ENTSOG undertook projects to update the TP, enabling TSOs to publish daily measured values of the gross calorific value, Wobbe index, hydrogen content blended in the natural gas system, methane content, as well as oxygen content at relevant points.

In 2024, ENTSOG provided many contributions to significant public stakeholder consultations, including those related to the revision of the Capacity Allocation Mechanisms Network Code (CAM NC). ENTSOG participated in three CAM NC consultations run by ACER throughout the year and proposed concrete wording for the amendment. Furthermore, ENTSOG provided a response to a public consultation on the fitness check of the energy security architecture launched by the European Commission in the autumn of 2024.

Piotr Kuś, ENTSOG General Director, commented, *"The Hydrogen and Decarbonised Gas Market package brings a new perspective, in particular, to the importance of clean molecules to decarbonise. Within the framework of the recently launched Clean Industrial Deal initiative, we can see clearly how gas grids are an asset of significant value, especially with respect to*

*repurposing existing infrastructure to transport renewable and low-carbon gases. We look forward to working closely with the soon-to-be established Association representing Hydrogen Transmission Network Operators – ENNOH.”*

The Annual Report 2024 is available [here](#).

#### Editorial notes

- > [The European Network of Transmission System Operators for Gas \(ENTSOG\)](#) was founded in 2009 and has played a key role in facilitating integration of the European gas markets, ensuring technical interoperability and providing security of supply by gas infrastructure planning. Within the scope of Regulation (EU) 2024/1789 and other relevant legislation, ENTSOG is contributing to the net-zero decarbonisation by 2050 by the integration of renewable and low carbon gases via future-proof gas transmission pipelines, in line with the EU energy and climate goals. More information on ENTSOG can be found on our website – or contact [info@entsog.eu](mailto:info@entsog.eu).
