

ACER Recommendations on Gas Transparency and views on ENTSOG New Transparency Platform

Lewis Hodgart SNE, ACER Gas Department

ENTSOG 8th Transparency Workshop Brussels, 11 December 2014

Agenda:

- 1). ACER transparency monitoring background
- 2). Assessment of new ENTSOG Transparency Platform
 - operational issues
 - data availability issues
- **3).** Conclusions
- 4). Recommendations

DISCLAIMER: The opinions expressed in this presentation do not necessarily represent the official views of the Agency.

Overall impression of new TP

- ENTSOG TP's 10/2013 version was updated on 10/2014
- ACER appreciates ENTSOG's & TSOs progress on transparency issues
- The Transparency Platform generally provides a framework allowing for all transparency obligations to be efficiently met
- Additional functions (visualisation, exporting, searching, map etc.) in principle provide for a better user experience
- Most of the previous ACER recommendations (opinion Oct. 2013) have been taken into account

However, ACER's assessment of the new TP (Nov. 2014) revealed some issues requiring further improvement

ACER's assessment of the new ENTSOG Transparency Platform (Nov. 2014)

Legal basis:

Chapter 3, Annex I of Regulation 715/2009

Subject:

New ENTSOG
Transparency Platform
– in operation from
<u>1st October 2014</u>

ACER's assessment of ENTSOG New Transparency Platform focused on two main issues:

Data availability issues

Availability of general, CMP and tariff data per IP and per TSO

TSO's and ENTSOG's responsibility

Operational issues

Usability of new TP from a user's perspective

> ENTSOG's responsibility

Operational issues

New useful function, which shows transport data (flows, capacities etc.) as a chart

-

- Time stamp showing when data was uploaded/updated and possibility for TSOs to upload data every hour
- 'All CAM-Relevant points' filter (export wizard function) does not work properly. The export file still contains domestic and storage points (which are not subject to NC CAM)

 Difficulties with downloading general data (capacities, flows etc.) for all TSOs at the same time (using only one indicator for a period of only one month – loading times / server access issues?)

Operational issues

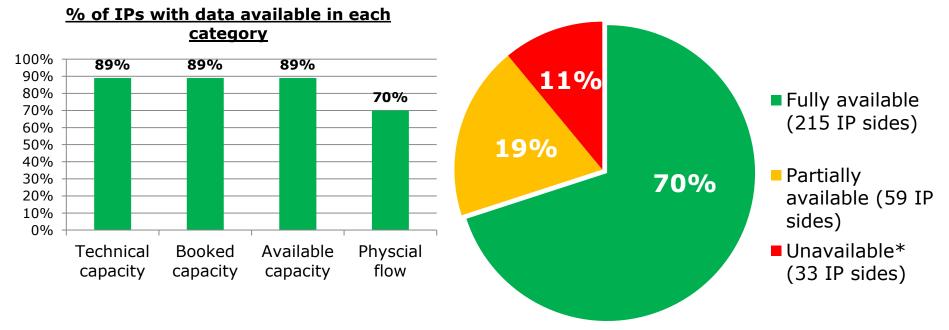

- For some TSOs (e.g. OGE, Fluxys Belgium, National Grid, Premier UK) some data is available only on screen – it is impossible to export
- CMP capacities made available: export option does not work properly – it is impossible to download data for TSOs even just for one week (this is why this option was not assessed in the next section – data availability issues)
- Frequency of publication for individual data categories is not clear (could be described in a user manual)

CONCLUSION: useful online functions (charts, searching per TSOs/IPs/zones), however export function needs to be improved and a user manual should be available

General data availability per IPs (%)

<u>General data</u> (technical, booked, available capacities and physical flow)

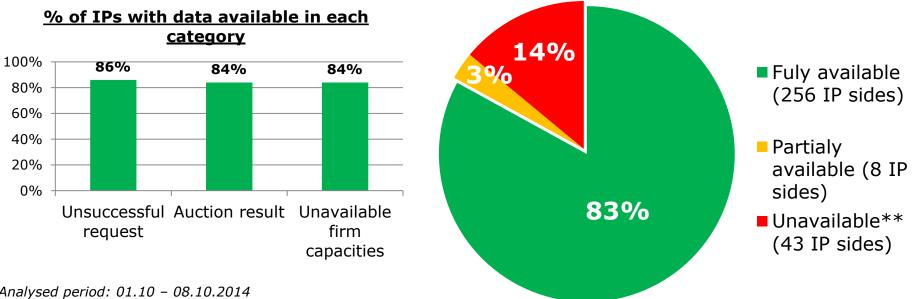

Analysed period: 01.10 - 08.10.2014

*Ruse (BG) / Giurgiu (RO) and Alveringem are not yet in operation that is the reason why data is unavailable for this IPs

<u>Methodology</u>

CMP data* (unsuccessful request, auction results, unavailable firm capacities)

CMP data availability per IPs (%)

Analysed period: 01.10 - 08.10.2014

* Only 3 categories were included in CMP data because for 4th - capacities made available – it was impossible to download the data for analysing period.

**Ruse (BG) / Giurgiu (RO) and Alveringem are not yet in operation that is the reason why data is unavailable for this IPs.

General & CMP data – main problems

1). Some **IPs are missing on the Transparency Platform** – no data for those

Related issue: New CAM IPs scope list (published: October 2014) is incomplete

2). For 3 TSOs* no data is available at all – BBL (NL), BGE (UK), Lubmin Brandov Gastransport (DE)

3). **Time period of general data availability** – for 5 TSOs data is not available as of 1st October 2013

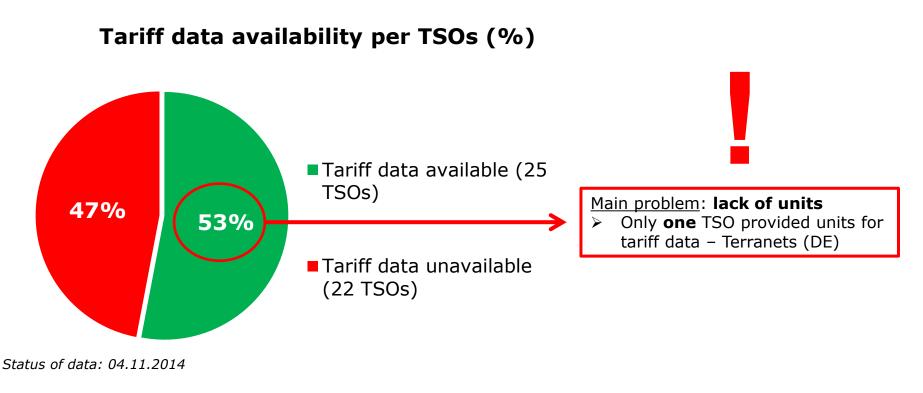

4). In export file for unavailable capacities (CMP data), no values are provided (when allocation process is listed)

* All those 3 TSOs have IPs listed in the new CAM IP list (October 2014).

Tariff data

Tariff data was analysed per TSO (not per IP) - tariff data not downloadable

<u>Methodology</u>

Conclusions

- 1). New Transparency Platform offers **useful online options** as charts, searching per TSOs/IPs/zones
- 2). Export option still needs to be improved many inconveniences have been observed
- 3). Only for 70% of IPs general data is fully available

4). For **83%** of IPs - **CMP data is fully availabl**e – big improvement compared to last assessment done for 1st ACER Monitoring Report on Congestion

5). Only **53%** of TSOs provided **tariff data**. Furthermore, among those only 1 TSO published units

Recommendations

CAM IP scope list (October 2014) should be corrected by **ENTSOG** and then used as a basis for all data published on TP \rightarrow 'All CAM-Relevant point' filter \blacktriangleright Usability, in particular the export function of the TP should be improved by **ENTSOG**, as it currently does not always allow data download **ENTSOG** should incorporate automated checks for data quality in all categories (i.e. for all IP sides, for all parameters, for the full period) > Data frequency - **TSOs** to provide "near real time" flow data on TP and **ENTSOG** to propose frequency standards in agreement with network users. **TSOs** are invited to provide historical data (5 years back) on TP All **NRAs** should check compliance of `their' TSOs \succ **TSOs** with a derogation and exempted infrastructure are invited to participate in the TP on a voluntary basis

Thank you for your attention!
