Gas Quality Outlook 2018

Regulatory background

> The long-term gas quality monitoring outlook is an ENTSOG deliverable required by the Interoperability Network Code (regulation EU 2015/703) article 18

> Aim: Identify trends and variability of gas quality parameters within 10 years

> Covering at least the Wobbe Index and GCV

> Identify potential new supply sources

> **Define reference values for the supply sources** based on previous years and stakeholder input

> For each region, produce a range within the parameter may evolve

> Consistent and aligned with the TYNDP
Gas Quality Outlook 2018

Results from 2017

> First Gas Quality Outlook published alongside TYNDP 2017

Gas Quality reference data for 2017

Example result graph for the South region (ES-FR-PT)
Draft reference values for 2018

- Revision of 2017 values carried out in view of new available measured data
- Inclusion of biomethane for the first time as supply source

*NP stands for national production and BIO for biomethane
