

## *Press Release*

### **European natural gas system ready for the winter 2016/17**

(Brussels, 14 October 2016, PR0117-16) ENTSOG adopted its Winter Supply Outlook 2016/17 and the accompanying Winter Review 2015/16.

**European natural gas infrastructures and storage levels on October 1<sup>st</sup> offer high enough flexibility to cover the demand over a cold winter** and to supply Ukraine with significant volumes of gas.

ENTSOG also assessed the capability of the European natural gas system to cope with high demand situations such as a peak day or a 2-week cold spell.

**In the hypothetical case of a transit disruption through Ukraine under a high demand situation, South-Eastern Europe would be strongly impacted.**

ENTSOG cooperates with ENTSO-E to assess the possible impact of such a disruption on the gas and electricity systems, through their respective Winter Outlooks.

ENTSOG Winter Supply Outlook is published annually following Article 8(3)(f) of Regulation (EC) 715/2009, to provide a valuable overview of the European natural gas transmission network for the upcoming winter.

Jan Ingwersen, ENTSOG General Manager, said:

*“The Winter Supply Outlook 2016/17 shows that, thanks to the gas infrastructure, shippers are able to meet high demand situations in every country under various supply conditions.”*

The Winter Supply Outlook 2016/17 is available [here](#).
